User Manual of 9600/8600/7700/7600 Series NVR

Regulatory information FCC information

FCC compliance : This equipment has been tested and found to comply with the limits for a digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

FCC conditions

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1. This device may not cause harmful interference.
- 2. This device must accept any interference received, including interference that may cause undesired operation.

EU Conformity Statement

CE

This product and - if applicable - the supplied accessories too are marked with "CE" and comply therefore with the applicable harmonized European standards listed under the Low Voltage Directive 2006/95/EC, the EMC Directive 2004/108/EC.

2002/96/EC (WEEE directive): Products marked with this symbol cannot be disposed of as unsorted municipal waste in the European Union. For proper recycling, return this product to your local supplier upon the purchase of equivalent new equipment, or dispose of it at designated collection points. For more information see: www.recyclethis.info.

2006/66/EC (battery directive): This product contains a battery that cannot be disposed of as unsorted municipal waste in the European Union. See the product documentation for specific battery information. The battery is marked with this symbol, which may include lettering to indicate cadmium (Cd), lead (Pb), or mercury (Hg). For proper recycling, return the battery to your supplier or to a designated collection point. For more information see: www.recyclethis.info.

Preventive and Cautionary Tips

Before connecting and operating your device, please be advised of the following tips:

- Ensure unit is installed in a well-ventilated, dust-free environment.
- Unit is designed for indoor use only.
- Keep all liquids away from the device.
- Ensure environmental conditions meet factory specifications.
- Ensure unit is properly secured to a rack or shelf. Major shocks or jolts to the unit as a result of dropping it may cause damage to the sensitive electronics within the unit.
- Use the device in conjunction with an UPS if possible.
- Power down the unit before connecting and disconnecting accessories and peripherals.
- A factory recommended HDD should be used for this device.
- Improper use or replacement of the battery may result in hazard of explosion. Replace with the same or equivalent type only. Dispose of used batteries according to the instructions provided by the battery manufacturer.

Product Key Features

General

- Connectable to network cameras, network dome and DVS.
- Connectable to the third-party network cameras like AXIS, ONVIF, PANASONIC, PSIA, SAMSUNG and SANYO.
- PAL/NTSC adaptive video inputs.
- Each channel supports dual-stream.
- Up to 64 network cameras can be connected for 9600/8600 series NVR, 32 network cameras for 7700/S-P8, and 16 network cameras for 7600/S-P8.
- Independent configuration for each channel, including resolution, frame rate, bit rate, image quality, etc.
- The quality of the input and output record is configurable.

Local Monitoring

- Simultaneous HDMI, VGA and CVBS outputs.
- HDMI output and VGA output at up to 1920×1080 resolution.
- Multiple screen display in live view is supported, and the display sequence of channels is adjustable.
- Live view screen can be switched in group, and manual switch and automatic cycle live view are also provided, and the interval of automatic cycle can be adjusted.
- Quick setting menu is provided for live view.
- Motion detection, tamper-proof, video exception alert and video loss alert functions.
- Privacy mask.
- Multiple PTZ protocols supported; PTZ preset, patrol and pattern.
- Zooming in by clicking the mouse and PTZ tracing by dragging mouse.

HDD Management

- For 9600-X series, up to 16 SATA hard disks and 2 eSATA disks can be connected. For 7600/S-P8 series, 2 SATA hard disks and 1 eSATA disks can be connected. For 7700/S-P8 series, 4 SATA hard disks and 1 eSATA disk can be connected. And up to 8 SATA hard disks and 1 eSATA disk can be connected for other models. (Each disk with a maximum of 4TB storage capacity.)
- 8 network disks (8 NAS disks, or 7 NAS disks+1 IP SAN disk) can be connected.
- Support eSATA disks for recording or backup.
- Support S.M.A.R.T. and bad sector detection. (Not supported with 9600-R series NVR.)
- HDD group management.
- Support HDD standby function.
- HDD property: redundancy, read-only, read/write (R/W).
- HDD quota management; different capacity can be assigned to different channel.
- Support RAID0, RAID1, RAID5, RAID10 storage scheme. And 8 virtual disks can be configured. (Only for the 9600-R series NVR.)

Recording, Capture and Playback

- Holiday recording schedule configuration.
- Normal and event video encoding parameters.
- Multiple recording types: manual, normal, alarm, motion, motion | alarm, motion & alarm.
- 8 recording time periods with separated recording types.
- Pre-record and post-record for alarm, motion detection for recording, and pre-record time for

schedule and manual recording.

- Searching record files and captured pictures by events (alarm input/motion detection).
- Tag adding for record files, searching and playing back by tags.
- Locking and unlocking record files.
- Local redundant recording and capture.
- Provide new playback interface with easy and flexible operation.
- Searching and playing back record files by channel number, recording type, start time, end time, etc.
- Motion analysis for the selected area in the video.
- Zooming in when playback.
- Playing reversely.
- Reverse playback of multi-channel.
- Supports pause, play reverse, speed up, speed down, skip forward, and skip backward when playback, and locating by dragging the mouse.
- Up to 16-ch synchronous playback at 4CIF real time.
- Manual capture, continuous capture of video images and playback of captured pictures.

Backup

- Export video data by USB, SATA or eSATA device.
- Export video clips when playback.
- Management and maintenance of backup devices.

Alarm and Exception

- Configurable arming time of alarm input/output.
- Alarm for video loss, motion detection, tampering, abnormal signal, video input/output standard mismatch, illegal login, network disconnected, IP confliction, abnormal record/capture, HDD error, and HDD full, etc.
- Alarm triggers full screen monitoring, audio alarm, notifying surveillance center, sending email and alarm output.
- Automatic restore when system is abnormal.

Other Local Functions

- Operable by front panel, mouse, remote control, and control keyboard.
- Three-level user management; admin user is allowed to create many operating accounts and define their operating permission, which includes the limit to access any channel.
- Operation, alarm, exceptions and log recording and searching.
- Manually triggering and clearing alarms.
- Import and export of device configuration information.

Network Functions

- 2 self-adaptive 10M/100M/1000M network interfaces, and various working modes are configurable: multi-address, load balance, network fault tolerance, etc. (Two NIC are only for the 9600/R/X and 8600 series NVR.)
- 8 independent PoE network interfaces are provided for 7700/7600S-P8 series.
- IPv6 is supported.
- TCP/IP protocol, PPPoE, DHCP, DNS, DDNS, NTP, SADP, SMTP, SNMP, NFS, and iSCSI are supported.
- TCP, UDP and RTP for unicast.
- Auto/Manual port mapping by UPnP.
- Remote web browser access by HTTPS ensures high security.

- Remote reverse playback through RTSP.
- Support accessing by the platform via ONVIF.
- Remote search, playback, download, locking and unlocking of the record files, and support downloading files broken transfer resume.
- Remote parameters setup; remote import/export of device parameters.
- Remote viewing of the device status, system logs and alarm status.
- Remote keyboard operation.
- Remote locking and unlocking of control panel and mouse.
- Remote HDD formatting and program upgrading.
- Remote system restart and shutdown.
- RS-232, RS-485 transparent channel transmission.
- Alarm and exception information can be sent to the remote host
- Remotely start/stop recording.
- Remotely start/stop alarm output.
- Remote PTZ control.
- Remote JPEG capture.
- Two-way audio and voice broadcasting.
- Embedded WEB server.

Development Scalability:

- SDK for Windows and Linux system.
- Source code of application software for demo.
- Development support and training for application system.

Figure 1. 3 8600

Table 1. 1 Description of Control Panel Buttons

	r r r r r r r r r r r r r r r r r r r				
No.	Name		Function Description		
	Status Indicators	ALARM	Turns red when a sensor alarm is detected.		
		READY	Ready indicator is normally blue, indicating that the device is functioning properly.		
1			Turns blue when device is controlled by an IR remote.		
		STATUS	Turns red when controlled by a keyboard and purple when IR remote and keyboard is used at the same time.		
		HDD	Blinks red when data is being read from or written to HDD.		

No.	Name		Function Description
		MODEM (Not for 9600-X)	Reserved for future usage.
		TX/RX	Blinks blue when network connection is functioning properly.
			Guard indicator turns blue when the device is in armed status; at
			this time, an alarm is enabled when an event is detected.
		GUARD	The indicator turns off when the device is unarmed. The
			arm/disarm status can be changed by pressing and holding on the
2		Receiver	ESC button for more than 3 seconds in live view mode. Receiver for IR remote
2		Panel Lock	Receiver for IR remote
3		Panel Lock D/R/X series)	You can lock or unlock the panel by the key.
4	DV	D-R/W	Slot for DVD-R/W.
			Switch to the corresponding channel in Live view or PTZ Control mode.
			Input numbers and characters in Edit mode.
5	Alphanur	neric Buttons	Switch between different channels in Playback mode.
			The light of the button is blue when the corresponding channel is recording; it is red when the channel is in network transmission
			status; it is pink when the channel is recording and transmitting.
6	USB 1	Interfaces	Universal Serial Bus (USB) ports for additional devices such as USB mouse and USB Hard Disk Drive (HDD).
		ESC	Back to the previous menu.
			Press for Arming/disarming the device in Live View mode.
			Enter the Manual Record setting menu.
		REC/SHOT	In PTZ control settings, press the button and then you can call a
		KEC/SHU1	PTZ preset by pressing Numeric button.
			It is also used to turn audio on/off in the Playback mode.
		PLAY/AUTO	The button is used to enter the Playback mode.
			It is also used to auto scan in the PTZ Control menu.
		ZOOM+	Zoom in the PTZ camera in the PTZ Control setting.
	~ .		Adjust focus in the PTZ Control menu.
7	Composite Keys	A/FOCUS+	It is also used to switch between input methods (upper and lowercase elabered symbols and numeric input)
	KCy5		lowercase alphabet, symbols and numeric input). Edit text fields. When editing text fields, it will also function as a
			Backspace button to delete the character in front of the cursor.
			On checkbox fields, pressing the button will <i>tick</i> the checkbox.
		EDIT/IRIS+	In PTZ Control mode, the button adjusts the iris of the camera.
			In Playback mode, it can be used to generate video clips for
			backup.
			Enter/exit the folder of USB device and eSATA HDD.
		MAIN/SPOT/ZOO	Switch between main and spot output.
		М-	In PTZ Control mode, it can be used to zoom out the image.
		F1/ LIGHT	Select all items on the list when used in a list field.

No.	Name		Function Description
			In PTZ Control mode, it will turn on/off PTZ light (if
			applicable).
			In Playback mode, it is used to switch between play and reverse
			play.
			Cycle through tab pages.
		F2/ AUX	In synchronous playback mode, it is used to switch between
			channels.
			Press the button will help you return to the Main menu (after
			successful login).
			Press and hold the button for 5 seconds will turn off audible key
		MENU/WIPER	
			In PTZ Control mode, the MENU/WIPER button will start wiper
			(if applicable).
			In Playback mode, it is used to show/hide the control interface.
			Switch between single screen and multi-screen mode.
		PREV/FOCUS-	In PTZ Control mode, it is used to adjust the focus in
			conjunction with the A/FOCUS+ button.
			Enter the PTZ Control mode.
		PTZ/IRIS-	In the PTZ Control mode, it is used to adjust the iris of the PTZ
			camera.
			The DIRECTION buttons are used to navigate between different fields and items in menus.
			In the Playback mode, the Up and Down button is used to speed
			up and slow down recorded video. The Left and Right button
		DIRECTION	will select the next and previous record files.
			In Live View mode, these buttons can be used to cycle through
			channels.
	Control	Control Buttons	In PTZ control mode, it can control the movement of the PTZ
8	Buttons		camera.
			The ENTER button is used to confirm selection in any of the
			menu modes.
			It can also be used to <i>tick</i> checkbox fields.
		ENTER	In Playback mode, it can be used to play or pause the video.
			In single-frame Playback mode, pressing the button will advance
			the video by a single frame.
			In Auto-switch mode, it can be used to stop /start auto switch.
			Move the active selection in a menu. It will move the selection
			up and down.
			In Live View mode, it can be used to cycle through different
0	IOC SILL	TIE Control	channels.
9	JOG SHU	FTLE Control	In the Playback mode: For 9600/R/X series, the ring is used to
			jump 30s forward/backward in video files. For 8600 series, the
			outer ring is used to speed up or slow down the record files and the inner ring is used to jump 30s forward/backward in records
			files.
			11105.

No.	Name	Function Description
		In PTZ control mode, it can control the movement of the PTZ
		camera.
10	POWER ON/OFF	Power on/off switch.

Figure 1. 4 7700

No.	N	ame	Function Description
	Status Indicators	POWER	Turns green when NVR is powered up.
		READY	The indicator is green when the device is running normally.
1		STATUS	The light is green when the IR remote control is enabled; The light is red when the function of the composite keys (SHIFT) are used; The light is out when none of the above condition is met.
		ALARM	The light is red when there is an alarm occurring.
		HDD	Blinks red when HDD is reading/writing.
		Tx/Rx	Blinks green when network connection is functioning normally.
2	DVD-R/W		Slot for DVD-R/W.
	Control Buttons		In menu mode, the direction buttons are used to navigate between different fields and items and select setting parameters. In playback mode, the Up and Down buttons are used to speed up
		DIRECTION	and slow down record playing, and the Left and Right buttons are used to move the recording 30s forwards or backwards.
3			In the image setting interface, the up and down button can adjust the level bar of the image parameters. In live view mode, these buttons can be used to switch channels.
5			The Enter button is used to confirm selection in menu mode; or used to check checkbox fields and ON/OFF switch.
			In playback mode, it can be used to play or pause the video.
		ENTER	In single-frame play mode, pressing the Enter button will play the video by a single frame.
			In auto sequence view mode, the buttons can be used to pause or resume auto sequence.

No.	Name		Function Description
			Switch between the numeric or letter input and functions of the
		SHIFT	composite keys. (Input letter or numbers when the light is out;
			Realize functions when the light is red.)
			Enter numeral "1";
		1/MENU	Access the main menu interface.
			Enter numeral "2";
			Enter letters "ABC";
			The F1 button when used in a list field will select all items in the
		2/ABC/F1	list.
			In PTZ Control mode, it will turn on/off PTZ light and when the
			image is zoomed in, the key is used to zoom out.
			Enter numeral "3";
			Enter letters "DEF";
		3/DEF/F2	The F2 button is used to change the tab pages.
			In PTZ control mode, it zooms in the image.
			Enter numeral "4";
		4/GHI/ESC	Enter letters "GHI";
		., 011, 25 0	Exit and back to the previous menu.
			Enter numeral "5";
	Composite		
4	Keys		Enter letters "JKL";
		5/JKL/EDIT	Delete characters before cursor;
			Check the checkbox and select the ON/OFF switch;
		6/MNO/PLAY	Start/stop record clipping in playback.
			Enter numeral "6";
			Enter letters "MNO";
		7/PQRS/REC	Playback, for direct access to playback interface. Enter numeral "7";
			Enter letters "PQRS";
			Open the manual record interface.
			Enter numeral "8";
		8/TUV/PTZ	Enter letters "TUV";
			Access PTZ control interface.
		9/WXYZ/PRE	Enter numeral "9";
		V	Enter letters "WXYZ";
			Multi-channel display in live view.
			Enter numeral "0";
		0/A	Shift the input methods in the editing text field. (Upper and
		0/11	lowercase, alphabet, symbols or numeric input).
			Double press the button to switch the main and auxiliary output.
			Move the active selection in a menu. It will move the selection up
			and down.
5	JOG SHU	FTLE Control	In Live View mode, it can be used to cycle through different
	JOG SHOTTLE Control		channels.
			In the Playback mode, it can be used to jump 30s
			forward/backward in video files.

No.	Name	Function Description
		In PTZ control mode, it can control the movement of the PTZ
		camera.
6	POWER ON/OFF	Power on/off switch.
7	USB Interfaces	Universal Serial Bus (USB) ports for additional devices such as
/		USB mouse and USB Hard Disk Drive (HDD).

			the video by a single frame.
			And in auto sequence view mode, the buttons can be used to
			pause or resume auto sequence.

1.2 IR Remote Control Operations

The NVR may also be controlled with the included IR remote control, shown in Figure 1. 6. *Note:* Batteries (2×AAA) must be installed before operation.

Figure 1.6 Remote Control

The keys on the remote control	closely resemble the ones on	the front panel. See Table 1.5.
--------------------------------	------------------------------	---------------------------------

Table 1 4 Description	of the Soft Keyboard Icons
Table 1. + Description	of the Soft Reyboard rolls

No.	Name Description

4	EDIT Button	Same as EDIT/IRIS+ button on front panel.	
5	A Button	Same as A/FOCUS+ button on front panel.	
6	REC Button	Same as REC/SHOT button on front panel.	
7	PLAY Button	Same as the PLAY/AUTO button on front panel.	
8	INFO Button	Reserved.	
9	VOIP/MON Button	Same as the MAIN/SPOT/ZOOM- button on front panel.	
10	MENU Button	Same as the MENU/WIPER button on front panel.	
11	PREV Button	Same as the PREV/FOCUS- button on front panel.	
12	DIRECTION/ENTER	Same as the DIRECTION/ENTER buttons on front panel.	

	Buttons	
13	PTZ Button	Same as the PTZ/IRIS- button on front panel.
14	ESC Button	Same as the ESC button on front panel.
15	RESERVED	Reserved for future usage.
16	F1 Button	Same as the F1/LIGHT button on front panel.
17	PTZControl Buttons	Buttons to adjust the iris, focus and zoom of a PTZ camera.
18	F2 Button	Same as the F2/AUX button on front panel.

Troubleshooting Remote Control:

Note: Make sure you have installed batteries properly in the remote control. And you have to aim the remote control at the IR receiver in the front panel.

If there is no response after you press any button on the remote, follow the procedure below to troubleshoot. *Steps:*

- 1. Go to Menu > Settings > General > More Settings by operating the front control panel or the mouse.
- 2. Check and remember NVR ID#. The default ID# is 255. This ID# is valid for all the IR remote controls.
- **3.** Press the DEV button on the remote control.
- 4. Enter the NVR ID# you set in step 2.
- 5. Press the ENTER button on the remote.

If the Status indicator on the front panel turns blue, the remote control is operating properly. If the Status indicator does not turn blue and there is still no response from the remote, please check the following:

- 1. Batteries are installed correctly and the polarities of the batteries are not reversed.
- 2. Batteries are fresh and not out of charge.
- **3.** IR receiver is not obstructed.

If the remote still can't function properly, please change a remote and try again, or contact the device provider.

1.3 USB Mouse Operation

A regular 3-button (Left/Right/Scroll-wheel) USB mouse can also be used with this NVR. To use a USB mouse:

- 1. Plug USB mouse into one of the USB interfaces on the front panel of the NVR.
- 2. The mouse should automatically be detected. If in a rare case that the mouse is not detected, the possible reason may be that the two devices are not compatible, please refer to the recommended the device list from your provider.

The operation of the mouse:

Name	Action	Description	
	Single-Click	Live view: Select channel and show the quick set menu.	
		Menu: Select and enter.	
	Double-Click	Live view: Switch between single-screen and multi-screen.	
Left-Click	Click and Drag	PTZ control: pan, tilt and zoom.	
		Tamper-proof, privacy mask and motion detection: Select target area.	
		Digital zoom-in: Drag and select target area.	
		Live view: Drag channel/time bar.	
Right-Click	Single-Click	Live view: Show menu.	
		Menu: Exit current menu to upper level menu.	
Scroll-Wheel	Scrolling up	Live view: Previous screen.	
		Menu: Previous item.	
	Scrolling down	Live view: Next screen.	
		Menu: Next item.

Chapter 2 Getting Started

2.1 Starting Up and Shutting Down the NVR

Purpose:

Proper startup and shutdown procedures are crucial to expanding the life of the NVR.

Before you start:

Check that the voltage of the extra power supply is the same with the NVR's requirement, and the ground connection is working properly.

Starting up the NVR:

Steps:

1. Check the power supply is plugged into an electrical outlet. It is HIGHLY recommended that an

Uninterruptible Power Supply (UPS) be used in conjunction with the device. The Power indicator LED on the front panel should be red, indicating the device gets the power supply.

- 2. Press the **POWER** button on the front panel. The Power indicator LED should turn blue indicating that the unit begins to start up.
- **3.** After startup, the Power indicator LED remains blue. A splash screen with the status of the HDD appears on the monitor. The row of icons at the bottom of the screen shows the HDD status. 'X' means that the HDD is not installed or cannot be detected.

Shutting down the NVR

Steps:

There are two proper ways to shut down the NVR. To shut down the NVR:

• **OPTION 1: Standard shutdown**

1. Enter the Shutdown menu.

Menu > Shutdown

- 2. Click the Shutdown button.
- 3. Click the Yes button.

• OPTION 2: By operating the front panel

- 1. Press and hold the POWER button on the front panel for 3 seconds.
- 2. Enter the administrator's username and password in the dialog box for authentication.
- 3. Click the Yes button.

Note: Do not press the POWER button again when the system is shutting down.

Rebooting the NVR

In the Shutdown menu, you can also reboot the NVR.

Steps:

- 1. Enter the Shutdown menu by clicking Menu > Shutdown.
- 2. Click the Logout button to lock the NVR or the Reboot button to reboot the NVR.

2.2 Using the Wizard for basic configuration

By default, the Setup Wizard starts once the NVR has loaded, as shown in Figure 2. 2.

Figure 2. 2 Start Wizard Interface

Operating the Setup Wizard:

- The Setup Wizard can walk you through some important settings of the NVR. If you don't want to use the Setup Wizard at that moment, click the Cancel button. You can also choose to use the Setup Wizard next time by leaving the "Start wizard when the device starts?" checkbox checked.
- 2. Click Next button on the Wizard window to enter the Login window, as shown in Figure 2.3.

	Wizard

2.3 Adding and Connecting the IP Cameras

2.3.1 Adding the online IP Cameras

Purpose:

The main function of the NVR is to connect the network cameras and record the video got from it. So before you can get a live view or record of the video, you should add the network cameras to the connection list of the device. *Before you start:*

Ensure the network connection is valid and correct. For detailed checking and configuring of the network, please see *Chapter Checking Network Traffic* and *Chapter Configuring Network Detection*.

Steps:

1. Enter the Camera Management interface.

Main menu> Camera> Camera

۰	Export >	Camera
_	Manual 🕨 🕨	OSD
ŝ	HDD •	Image
щ®	Record	PTZ
r.	Camera 🕨	Motion
Ľ	Configuration	Privacy Mask
¥.	Maintenance	Video Tampering Detection
Φ	Shutdown	Video Loss

Figure 2.11 Main Menu

- 2. To add the online cameras with same network segment:
 - 1) Click **Search** to search the online cameras.

IP Camera						
IP Camera	IP Camera 2	v	No.	Edit	IP Address	Amount of Devic

Figure 2. 12 Camera Settings Interface

- 2) Check the checkbox of certain cameras to be added.
- 3) Click **Quick Add** to add the camera.
- **3.** To add other IP cameras:
 - 1) On the left side of the interface, you can enter the IP address, protocol, management port, user name, password and other information of the IP camera to be added.
 - 2) Click **Add** to add the camera.

2.3.2 Editing the connected IP cameras and Configuring Customized Protocols

After the adding of the IP cameras, the basic information of the camera lists in the page, you can configure the basic setting of the IP cameras.

Steps:

1. Click the 🔟 icon to edit the parameters; you can edit the IP address, protocol and other parameters.

Edit IP Camera					
IP Camera No.	D1

	Apply		ОК	Cancel

Figure 2.16 Protocol Management Interface

2. There are 16 customized protocols provided in the system, you can select one and configure its corresponding parameters.

Note: Before customizing the protocol for the network camera, you have to contact the manufacturer of the network camera to consult the URL (uniform resource locator) for getting main stream and sub-stream.

Example: The format of the URL is: [Type]://[IP Address of the network camera]:[Port]/[Path]. E.g., rtsp://192.168.1.55:554/ch1/main/av_stream.

- Protocol Name: Edit the name for the custom protocol.
- Enable Substream: If the network camera does not support sub-stream or the sub-stream is not needed, leave the checkbox empty.
- Type: The network camera adopting custom protocol must support getting stream through standard RTSP.
- **Transfer Protocol:** Select the transfer protocol for the custom protocol.
- **Port:** Set the port No. for the custom protocol.
- Path: Set the resource path for the custom protocol. E.g., ch1/main/av_stream.
- 3. Click the Apply button to save the settings and click OK to finishing customizing the protocol.

After adding the customized protocols, you can see the protocol name is listed in the dropdown list, please refer to Figure 2. 17.

Figure 2. 18 Adding an IP Camera through Customized Protocol

2.3.3 Editing IP cameras connected to the PoE interfaces

The PoE interfaces enables the NVR system to pass electrical power safely, along with data, on Ethernet cabling to the connected network cameras.

The 7700/7600S-P8 series NVR provides 8 PoE interfaces which can connect to 8 network cameras directly; and if you disable the PoE interface, you can also connect to the online network cameras. And the PoE interface supports the Plug-and-Play function.

Example:

As for 7608/7708NI-SP NVR, when you want to connect 2 online cameras and connect 6 network cameras via

PoE interfaces, you must disable 2 PoE interfaces in the Edit IP Camera menu.

To add Cameras for NVR supporting PoE function:

Before you start:

Connect the network cameras via the PoE interfaces.

Steps:

1. Enter the Camera Management interface.

Main menu> Camera> Camera

You can see the connected cameras are listed.

IP Camera

Chapter 3 Live View

3.1 Introduction of Live View

Live view shows you the video image getting from each camera in real time. The NVR automatically enters Live View mode when powered on. It is also at the very top of the menu hierarchy, thus pressing the ESC many times (depending on which menu you're on) brings you to the Live View mode.

Live View Icons

In the live view mode, there are icons at the right top of the screen for each channel, showing the status of the record and alarm in the channel, so that you can know whether the channel is recorded, or whether there are alarms occur as soon as possible.

Icons	Description
	Alarm (video loss, tampering, motion detection or sensor alarm)
1	Record (manual record, schedule record, motion detection or alarm triggered record)
	Alarm & Record

Table 3. 1 Description of Live View Icon	cons
--	------

3.2 Operations in Live View Mode

In live view mode, there are many functions provided. The functions are listed below.

- Single Screen: showing only one screen on the monitor.
- Multi-screen: showing multiple screens on the monitor simultaneously.
- Auto-switch: the screen is auto switched to the next one. And you must set the dwell time for each screen on the configuration menu before enabling the auto-switch.

Menu>Configuration>Live View>Dwell Time.

- Start Recording: normal record and motion detection record are supported.
- **Output Mode:** select the output mode to Standard, Bright, Gentle or Vivid.
- Playback: playback the recorded videos for current day.
- Aux/Main output switch: the NVR checks the connection of the output interfaces to define the main and auxiliary output interfaces. The priority level for the main and aux output is HDMI>VGA>CVBS. This means if the HDMI is used, it will be the main output. If the HDMI is not used, the VGA output will be the main output. See the table below.

	HDMI	VGA	CVBS	Main output	Auxiliary
					output
1	\checkmark	\checkmark	\checkmark	HDMI	VGA
2	\checkmark	×	\checkmark	HDMI	CVBS
3	×	\checkmark	\checkmark	VGA	CVBS
4	×	×		CVBS	

Table 3. 2 Priorities of Interfaces

• $\sqrt{}$ means the interface is in use, \times means the interface is out of use or the connection is invalid. And the HDMI, VGA and CVBScan be used at the same time.

When the aux output is enabled, the main output can't do any operation, and you can do some basic operation on the live view mode for the Aux output.

Note: For 7600S-P8, there is only one audio output, the VGA output has a higher priority over CVBS output.

When you enable the audio in both the CVBS and VGA audio output, the audio from the audio out interface is for VGA.

3.2.1 Front Panel Operation on Live View

Functions	Front Panel Operation
Show single screen	Press the corresponding Alphanumeric button. E.g. Press 2 to display only the screen
	for channel 2.
Show multi-screen	Press the PREV/FOCUS- button.
Manually switch	Next screen: right/down direction button.
screens	Previous screen: left/up direction button.
Auto-switch	Press Enter button.
Playback	Press Play button.

Table 3.3 Front Panel Operation in Live View

Switch between main	Press Main/Aux button.
and aux output	

3.2.2 Using the Mouse in Live View

Name	Description
Menu	Enter the main menu of the system by right clicking the mouse.
Single Screen	Switch to the single full screen by choosing channel number from the dropdown list.
Multi-screen	Adjust the screen layout by choosing from the dropdown list.
Previous Screen	Switch to the previous screen.
Next Screen	Switch to the next screen.
Start/Stop Auto-switch	Enable/disable the auto-switch of the screens.
Start Recording	Start normal recording or motion detection recording of all channels.
Playback	Enter the playback interface and start playing back the video of the selected channel
	immediately.
Output Mode	Four modes of output supported, including Standard, Bright, Gentle and Vivid.
Aux Monitor	Switch to the auxiliary output mode and the operation for the main output is disabled.

Table 3.4 Mouse Operation in Live View

Note: The dwell time of the live view configuration must be set before using Start Auto-switch.

Note: If you enter Aux monitor mode and the Aux monitor is not connected, the mouse operation is disabled; you need to switch back to the Main output with the MAIN/AUX button on the front panel or remote.

Note: If the corresponding camera supports intelligent function, the Reboot Intelligence option is included when right-clicking mouse on this camera.

Figure 3.1 Right-click Menu

3.2.3 Using an Auxiliary Monitor

Certain features of the Live View are also available while in an Aux monitor. These features include:

• Single Screen: Switch to a full screen display of the selected camera. Camera can be selected from a

dropdown list.

- Multi-screen: Switch between different display layout options. Layout options can be selected from a dropdown list.
- Next Screen: When displaying less than the maximum number of cameras in Live View, clicking this feature will switch to the next set of displays.
- Playback: Enter into Playback mode.
- PTZ: Enter PTZ Control mode.
- Main Monitor: Enter Main operation mode.

Note: In the live view mode of the main output monitor, the menu operation is not available while Aux output mode is enabled.

3.2.4 Quick Setting Toolbar in Live View Mode

On the screen of each channel, there is a quick setting toolbar which shows when you single click the mouse in the corresponding screen.

Figure 3.2 Quick Setting Toolbar

Table 3. 5 Description of Quick Setting Toolbar Icons							
Icons	Description Icons Description		Icons	Description			
j	Enable/Disable Manual Record	Ģ	Instant Playback	*	Mute/Audio on		
0	Capture	ŝ	PTZ Control	Q	Digital Zoom		
0	Image Settings	ja ja	Live View Strategy	Ĩ	Close		
П	Text Show						

f Out als Catt . .. T. 11

Instant Playback only shows the record in last five minutes. If no record is found, it means there is no record during the last five minutes.

Digital Zoom can zoom in the selected area to the full screen. You can left-click and draw to select the area to zoom in, as shown in Figure 3.3.

Figure 3. 3 Digital Zoom

Image Settings icon can be selected to enter the Image Settings menu.

Figure 3. 4 Image Settings- Preset

You can also choose the Customize mode to set the image parameters like brightness, contrast, saturation and hue.

Figure 3. 5 Image Settings- Customize

Live View Strategy can be selected to set strategy, including Real-time, Balanced, Fluency.

Live View	Strategy 🖸	3]
● Real-time)

Fluency		
ОК	Cancel	

Figure 3. 6 Live View Strategy

3.3 Adjusting Live View Settings

Purpose:

Live View settings can be customized according to different needs. You can configure the output interface, dwell time for screen to be shown, mute or turning on the audio, the screen number for each channel, etc.

Steps:

1. Enter the Live View Settings interface.

Menu> Configuration> Live View

Switch ~
۹۱

The settings available in this menu include:

• Video Output Interface: Designates the output to configure the settings for. Outputs include HDMI (depends on the model), VGA, Main CVBS and Spot Output.

Notes: No CVBS spot out for 7600S-P8 series NVR.

- Live View Mode: Designates the display mode to be used for Live View.
- **Dwell Time:** The time in seconds to *dwell* between switching of channels when enabling auto-switch in Live View.
- Enable Audio Output: Enables/disables audio output for the selected video output.
- **Event Output:** Designates the output to show event video.
- Full Screen Monitoring Dwell Time: The time in seconds to show alarm event screen.
 - 2. Setting Cameras Order

Figure 3.8 Live View- Camera Order

To set the camera order:

- 1) Select a View mode in
- 2) Select the small window, and double-click on the channel number to display the channel on the window.

You can click 🔽 button to start live view for all the channels and click 🔽 to stop all the

live view.

3) Click the **Apply** button to save the setting.

3.4 Channel-zero Encoding

Purpose:

Sometimes you need to get a remote view of many channels in real time from web browser or CMS(Client Management System) software, in order to decrease the bandwidth requirement without affecting the image quality, channel-zero encoding is supported as an option for you.

Steps:

1. Enter the Live View Settings interface.

Menu> Configuration> Live View

2. Select the Channel-Zero Encoding tab.

Enable Channel-Zero Encoding	•	
Frame Rate	30fps	
Max. Bitrate Mode	General	
Max. Bitrate(Kbps)	1792	

Figure 3.9 Live View- Channel-Zero Encoding

- 3. Check the checkbox after Enable Channel Zero Encoding.
- 4. Configure the Frame Rate, Max. Bitrate Mode and Max. Bitrate.

After you set the Channel-Zero encoding, you can get a view in the remote client or IE browser of all the channels in one screen.

3.5 User Logout

Purpose:

After logging out, the monitor turns to the live view mode and if you want to do some operation, you need to enter user name and password tog in again.

Steps:

1. Enter the Shutdown menu.

Menu>Shutdown

Figure 3. 10 Shutdown

2. Click Logout.

Note: After you have logged out the system, menu operation on the screen is invalid. It is required to input a user name and password to unlock the system.

Chapter 4 PTZ Controls

4.1 Configuring PTZ Settings

Purpose:

Follow the procedure to set the parameters for PTZ. The configuring of the PTZ parameters should be done before you control the PTZ camera.

Before you start:

Check that the PTZ and the NVR are connected properly through RS-485 interface.

Steps:

1. Enter the PTZ Settings interface.

Menu >Camera> PTZ

General More Settings		
Camera	IP Camera 1	~
Baud Rate	9600	~
Data Bit		~
Stop Bit		~
Parity	None	~
Flow Ctrl	None	~
PTZ Protocol	Default	~
Address	0	
Address range: 0~255		

- 2. Choose the camera for PTZ setting in the Camera dropdown list.
- **3.** Enter the parameters of the PTZ camera.

Note: All the parameters should be exactly the same as the PTZ camera parameters.

4. Click Apply button to save the settings.

4.2 Setting PTZ Presets, Patrols & Patterns

Before you start:

Please make sure that the presets, patrols and patterns should be supported by PTZ protocols.

4.2.1 Customizing Presets

Purpose:

Follow the steps to set the Preset location which you want the PTZ camera to point to when an event takes place. *Steps:*

1. Enter the PTZ Control interface.

Menu>Camera>PTZ>More Settings

Figure 4. 2 PTZ- More Settings

- 2. Use the directional button to wheel the camera to the location where you want to set preset.
- 3. Click the round icon before Save Preset.
- 4. Click the preset number to save the preset.

Repeat the steps2-4 to save more presets. If the number of the presets you want to save is more than 17, you can click [...] and choose the available numbers.

Figure 4. 3 More Presets

4.2.2 Calling Presets

Purpose:

This feature enables the camera to point to a specified position such as a window when an event takes place.

Call preset in the PTZ setting interface:

Steps:

1. Enter the PTZ Control interface.

Menu>Camera>PTZ>More Settings

2. Check the round icon of Call Preset.

0 <u>t</u>	🗛 📽 🚾 I	-® ¥	Φ	Camera

Figure 4. 4 PTZ- Call Preset

3. Choose the preset number.

Call preset in live view mode:

Steps:

- 1. Press the PTZ button on the front panel or click the PTZ Control icon
 - the PTZ setting menu in live view mode.

Figure 4. 5 PTZ Panel

2. Choose Camera in the list on the menu.

3. Double click the preset in the **Preset** list to call it.

4.2.3 Customizing Patrols

Purpose:

Patrols can be set to move the PTZ to different key points and have it stay there for a set duration before moving on to the next key point. The key points are corresponding to the presets. The presets can be set following the steps above in *Customizing Presets*.

Steps:

1. Enter the PTZ Control interface.

Menu>Camera>PTZ>More Settings

- 2. Select patrol number in the drop-down list of patrol.
- 3. Select the **O** under Patrol option box to add key points for the patrol.

Figure 4. 6 PTZ- Add Key Point

4. Configure key point parameters, such as the key point No., duration of staying for one key point and speed of patrol. The key point is corresponding to the preset. The Key Point No. determines the order at which the PTZ will follow while cycling through the patrol. The Duration refers to the time span to stay at the corresponding key point. The Speed defines the speed at which the PTZ will move from one key point to the next.

		KeyPoint	
KeyPoint:1			
Preset	1		0
Duration	0		0
Speed	1		0
		ок	Cancel

Figure 4.7 Key point Configuration

5. Click OK to save the key point to the patrol.

Repeat the above steps to add more key points.

You can also delete all t	he key points by clicking	the trash icon
---------------------------	---------------------------	----------------

Select a key point, then click **I** or **I** button to adjust the order of the key points.

Figure 4. 11 PTZ- Pattern

3. Click A and use your mouse to drag the image or click the eight directional buttons in the control box under the image to move the PTZ camera.

The movement of the PTZ is recorded as the pattern.

4. Click **(B)** to save the pattern.

4.2.6 Calling Patterns

Purpose:

Follow the procedure to move the PTZ camera according to the predefined patterns.

Calling pattern in the PTZ setting interface

Steps:

1. Enter the PTZ Control interface.

Menu>Camera>PTZ>More Settings

- 2. Select the pattern number.
- 3. Click **O**, then the PTZ moves according to the pattern. Click **O** to stop it.

Figure 4. 12 PTZ- Calling Pattern

Call pattern in live view mode.

Steps:

1. In the live view mode, press PTZ control on the front panel or on the remote control, or click PTZ Control

icon icon on the quick setting panel.

- 2. And then choose **Pattern** on the control bar.
- **3.** Double click the pattern or select the pattern and click $\boxed{\times}$ to call it.

Figure 4. 13 PTZ Panel- Pattern

4.3 PTZ Control Panel

In the Live View mode, you can press the PTZ Control button on the front panel or on the remote control, or

choose the PTZ Control icon 🔤 to enter the PTZ panel.

Figure 4. 14 PTZ Panel

Chapter 5 Record and Capture Settings

5.1 Configuring Encoding Parameters

Purpose:

By configuring the encoding parameters you can define the parameters which affect the image quality, such as the transmission stream type, the resolution and so on.

Before you start:

1. Make sure that the HDD has already been installed. If not, please install a HDD and initialize it. (Menu>HDD>General)

■L	Capacity	Status	Property	Туре	Free Space	Gr	Edit	D
5	76,319MB	Normal	R/W	Local	33,792MB	1	-	-

- 2. Check the storage mode of the HDD
 - 1) Click **Advanced** to check the storage mode of the HDD.
 - 2) If the HDD mode is *Quota*, please set the maximum record capacity and maximum picture capacity. For detailed information, see *Chapter Configuring Quota Mode*.
 - 3) If the HDD mode is **Group**, you should set the HDD group. For detailed information, see *Chapter Configuring HDD Group for Recording and Capture*.

Storage Mode	
Mode	Group
Record on HDD Group	Quota
	Group
🖌 IP Camera 🛛 🗸 I	
	Eiguno E 2 UDD Advanced

Figure 5. 2 HDD- Advanced

Steps:

1. Enter the Record settings interface to configure the encoding parameters:

Menu>Record>Encoding

Camera	IP Camera 1		
Encoding Parameters	Main Stream(Normal)	Main Stream(Event)	
Stream Type	Video & Audio	Video & Audio	
Resolution	1280*720(HD720P)	1280*720(HD720P)	
Bitrate Type	Constant	Constant	
Video Quality		Higher	
Frame Rate	10fps		
Max. Bitrate Mode	General		
Max. Bitrate(Kbps)	512	512	
Max. Bitrate Range Reco	1023~1706(Kbps)	1023~1706(Kbps)	
Pre-record	5s		
Post-record	5s		
Expired Time (day)	0		
Record Audio	✓		

Figure 5.3 Record Encoding

- 2. Encoding Parameters Setting for Recording
 - 1) Select **Record** tab page to configure. You can configure the stream type, the resolution, and other parameters on your demand.

- **Pre-record:** The time you set to record before the scheduled time or event. For example, when an alarm triggered the recording at 10:00, if you set the pre-record time as 5 seconds, the camera records it at 9:59:55.
- **Post-record:** The time you set to record after the event or the scheduled time. For example, when an alarm triggered the recording ends at 11:00, if you set the post-record time as 5 seconds, it records till 11:00:05.
- **Expired Time:** The expired time is the longest time for a record file to be kept in the HDD, if the deadline is reached, the file will be deleted. You can set the expired time to 0, and then the file will not be deleted. The actual keeping time for the file should be determined by the capacity of the HDD.
- Redundant Record/ Capture: Enabling redundant record or capture means you save the record and captured picture in the redundant HDD. See *Chapter Configuring Redundant Recording and Capture*.
- Record Audio: Check the checkbox to enable or disable audio recording.
- 2) Click **Apply** to save the settings.

Note: The redundant record/capture is to decide whether you want the camera to save the record files or captured pictures in the redundant HDD. You must configure the redundant HDD in HDD settings. For detailed information, see *Chapter 11.4.2 Setting HDD Property*.

Note: The parameters of Main Stream (Event) are read-only.

- 3. Encoding Parameters Settings for Sub-stream
 - 1) Enter the Sub-stream tab page.

Camera	IP Camera 4	
Stream Type	Video & Audio	
Resolution	704*576(4CIF)	
Bitrate Type	Constant	
Video Quality	Low	
Frame Rate	Full Frame	
Max. Bitrate Mode	General	
Max. Bitrate(Kbps)	1024	
Max. Bitrate Range Recommended	960~1600(Kbps)	

Figure 5. 4 Sub-stream Encoding

- 2) Configure the parameters of the camera.
- 3) Click **Apply** to save the settings.
- 4. Encoding Parameters Settings for Capture
 - 1) Select the **Capture** tab.

Camera	IP Camera 3				
Parameter Type	Normal	Event			
Resolution	704*480(4CIF) ~	704*480(4CIF)			
Picture Quality	Medium ~	Medium			
Interval	2s ~	2s			

Figure 5. 5 Capture Encoding

- 2) Configure the parameters.
- 3) Click **Apply** to save the settings.

Note: The interval is the time period between two capturing actions. You can configure all the parameters on this menu on your demand.

5.2 Configuring Record/Capture Schedule

Purpose:

Set the record schedule, and then the camera automatically starts/stops recording according to the configured schedule.

Note: In this chapter, we take the record schedule procedure as an example, and the same procedure can be applied to configure schedule for both recording and capture. To schedule the automatic capture, you need to choose the Capture tab in the **Schedule** interface.

Steps:

- 1. Enter the Record Schedule interface.
 - Menu>Record/Capture>Schedule
- 2. Configure Record Schedule
 - 1) Select Record/Capture Schedule.

- 2) Choose the camera you want to configure.
- 3) Select the check box after the **Enable Schedule** item.
- 4) Click **Edit** button or click on the color icon under the edit button and draw the schedule line on the panel.

Edit the schedule:

I. In the message box, you can choose the day to which you want to set schedule.

Edit						
Schedule	Mon					
All Day		Туре	Normal 🗸			
Start/End Time	00:00-00:00	🕘 Туре	Normal v			
Start/End Time	00:00-00:00	🕘 Туре	Normal 🗸			
Start/End Time	00:00-00:00	🕚 Туре	Normal 🗸			
Start/End Time	00:00-00:00	🕚 Туре	Normal v			
Start/End Time	00:00-00:00	🕘 Туре	Normal v			
Start/End Time	00:00-00:00	🕚 Туре	Normal ~			
Start/End Time	00:00-00:00	🕚 Туре	Normal v			
Start/End Time	00:00-00:00	🕘 Туре	Normal v			
-	Copy Apply	ок	Cancel			

Figure 5.7 Recording Schedule Interface

You can click the button to set the accurate time of the schedule.

II. To schedule an all-day recording, check the checkbox after the All Day item.

All Day		Туре	Normal	ž
Start/End Time	00:00-00:00	Туре	Normal	
Start/End Time	00 \$:00 \$ 00 \$:00 \$	Туре	Normal	
Start/End Time	00:00-00:00	Туре	Normal	
Start/End Time	00:00-00:00	Туре	Normal	Ý

III. To arrange other schedule, leave the All Day checkbox blank and set the Start/End time.

Note: Up to 8 periods can be configured for each day. And the time periods can't be overlapped each other. Repeat the above edit schedule steps to schedule recording or capture for other days in the week. If the schedule can also be applied to other days, click **Copy**.

Figure 5.9 Copy Schedule to Other Days

- IV. Click **OK** to save setting and back to upper level menu.
- V. Click Apply in the Record Schedule interface to save the settings.

Draw the schedule:

Click on the color icons, you can choose the schedule type as normal or event.

Figure 5. 10 Draw the Schedule

Descriptions of the color icons are shown in the figure below.

Figure 5. 11 Descriptions of the color icons

Click the **Apply** button to validate the settings.

If the settings can also be used to other channels, click **Copy**, and then choose the channel to which you want to copy.

Figure 5. 12 Copy Schedule to Other Channels

5.3 Configuring Motion Detection Record and Capture

Purpose:

Follow the steps to set the motion detection parameters. In the live view mode, once a motion detection event takes place, the NVR can analyze it and do many actions to handle it. Enabling motion detection function can trigger certain channels to start recording, or trigger full screen monitoring, audio warning, notify the surveillance center and so on. In this chapter, you can follow the steps to schedule a record which triggered by the detected motion. *Steps:*

- 1. Enter the Motion Detection interface.
 - Menu>Camera>Motion

Motion Detection				
Camera	IP Camera 1			. •
Enable Motion Detection				
48-01-3810 PA 18-30-19	t	Settings Sensitivity	•	
State State	1 1000	Full Scree	n	
		Clear		

Figure 5. 13 Motion Detection

- 2. Configure Motion Detection:
 - 1) Choose camera you want to configure.
 - 2) Check the checkbox after **Enable Motion Detection**.
 - Drag and draw the area for motion detection by mouse. If you want to set the motion detection for all the area shot by the camera, click Full Screen. To clear the motion detection area, click Clear.

Figure 5. 14 Motion Detection- Mask

4) Click **Handling**, and the message box for channel information pop up.

	На	ndling		
Trigger Channel	Arming Schedule	Handling		
✓IP Camera	√ D1			
	A	pply	OK	Cancel

Figure 5. 15 Motion Detection Handling

- 5) Select the channels which you want the motion detection event to trigger recording.
- 6) Click **Apply** to save the settings.
- 7) Click **OK** to back to the upper level menu.
- 8) Exit the Motion Detection menu.
- **3.** Edit the Motion Detection Record Schedule. For the detailed information of schedule configuration, see *Chapter Configuring Record/Capture Schedule*.

5.4 Configuring Alarm Triggered Record and Capture

Purpose:

Follow the procedure to configure alarm triggered recording or capture.

Steps:

1. Enter the Alarm setting interface.

Menu> Configuration> Alarm

Alarm Status	Alarm Input	Alarm Output			
Alarm Input Lis	st				
No.	Alarm Na	me	IP Camera Address	Alarm Type	^

- **3.** Edit the Alarm triggered record in the Record/Capture Schedule setting interface. For the detailed information of schedule configuration, see *Chapter Configuring Record/Capture Schedule*.

5.5 Manual Record and Continuous Capture

Purpose:

Follow the steps to set parameters for the manual record and continuous capture. Using manual record and continuous capture, you need to manually cancel the record and capture. The manual recording and manual continuous capture is prior to the scheduled recording and capture.

Steps:

1. Enter the Manual settings interface.

Menu> Manual

Or press the REC/SHOT button on the front panel.

Record							
N IP Camera	1 OF D2	OFF D3	OFF D4	o# D5	off D6	OFF D7	o∓ D8

Motion Detection	\$						

Figure 5. 20 Manual Record

- 2. Enabling Manual Record
 - 1) Select **Record** on the left bar.
 - 2) Click the status button before camera number to change \square to \square .
- **3.** Disable manual record.
 - Click the status button to change OII to OIII .

Note: Green icon means that the channel is configured the record schedule. After rebooting, all the manual records enabled will be canceled.

- 4. Enabling and disabling the continuous capture
 - 1) Select Continuous Capture on the left bar.

Continuous Capture	3
IP Camera	o D1
○ Capturing by s ○ Capturing by n	

Figure 5. 21 Continuous Capture

- 2) Click the status button before camera number to change \square to \square .
- 3) Disable continuous capture.
- 4) Click the status button to change \bigcirc to \bigcirc to \bigcirc .

Note: Green icon means that the channel is configured the capture schedule. After rebooting, all the continuous capture will be canceled.

5.6 Configuring Holiday Record and Capture

Purpose:

Follow the steps to configure the record or capture schedule on holiday for that year. You may want to have different plan for recording and capture on holiday.

Steps:

1. Enter the Record setting interface.

Menu>Record> Holiday

Holiday Name	Status	Start Date	End Date	Edit	î
Holiday1	Disabled	1.Jan	1.Jan	1	I
Holiday2	Disabled	1.Jan	1.Jan	1	
Holiday3	Disabled	1.Jan	1.Jan	2	
Holiday4	Disabled	1.Jan	1.Jan	1	
Holiday5	Disabled	1.Jan	1.Jan	1

Figure 5. 22 Holiday Settings

- **2.** Enable Edit Holiday schedule.
 - 1) Click \blacksquare to enter the Edit interface.

	Edit			
Holiday Name	Holiday1			
Enable	✓			
Mode	By Month			v
Start Date	Jan	~	1	~
End Date	Jan	~	1	v
	Apply	y	ОК	Cancel

Figure 5. 23 Edit Holiday Settings

2) Check the checkbox after **Enable Holiday**.

3) Select Mode from the dropdown list.

There are three different modes for the date format to configure holiday schedule.

- 4) Set the start and end date.
- 5) Click **Apply** to save settings.
- 6) Click **OK** to exit the Edit interface.
- **3.** Enter Record/Capture Schedule settings interface to edit the holiday recording schedule. See *Chapter 6.2 Configuring Record/Capture Schedule*.

5.7 Configuring Redundant Recording and Capture

Purpose:

 $\label{eq:constraint} \mbox{Enabling redundant recording and capture, which means saving the record files and captured pictures not only in the R/W HDD but also in the redundant HDD, will effectively enhance the data safety and reliability. .$

Steps:

1. Enter HDD Information interface.

Menu> HDD

HDD Inf	ormation							
_L	Capacity	Status	Property	Туре	Free Space	Gr	Edit	D
4	76,319MB	Normal	R/W	Local	74,752MB	1		-
	Figure 5. 24 HDD General							

- 2. Select the HDD and click 📝 to enter the Local HDD Settings interface.
 - 1) Set the HDD property to Redundancy.

Figure 5. 25 HDD General-Editing

- 2) Click **Apply** to save the settings.
- 3) Click **OK** to back to the upper level menu.

Note: You must set the Storage mode in the HDD advanced settings to Group before you set the HDD property to Redundant. For detailed information, please refer to *Chapter 11.4 Managing HDD Group*. There should be at least another HDD which is in Read/Write status.

3. Enter the Record setting interface.

Menu> Record> Encoding

1) Select Record tab.

Camera	IP Camera 1	~
Encoding Parameters	Main Stream(Normal)	Main Stream(Event)
Stream Type	Video & Audio ~	Video & Audio 🗸 🗸 🗸
Resolution	1920*1080(1080P) ~	1920*1080(1080P) ~
Bitrate Type	Constant ~	Constant ~
Video Quality	Low ~	Low ~
Frame Rate	Full Frame ~	Full Frame ~
Max. Bitrate Mode	General ~	
Max. Bitrate(Kbps)	8192 ~	8192 ~
Max. Bitrate Range Recommended	2304~3840(Kbps)	2304~3840(Kbps)
Pre-record	5s	
Post-record	5s	
Expired Time (day)	0	
Redundant Record/Capture		
Record Audio	v	

Figure 5. 26 Encoding Record

2) Select Camera you want to configure in the drop-down list.

3) Check the checkbox of **Redundant Record/Capture**.

4) Click **OK** to save settings and back to the upper level menu.

Repeat the above steps for configuring other channels.

5.8 Configuring HDD Group for Recording and Capture

Purpose:

You can group the HDDs and save the record files and captured pictures in certain HDD group.

Steps:

1. Enter HDD setting interface.

Menu>HDD

HDD Inf	ormation							
L	Capacity	Status	Property	Туре	Free Space	Gr	Edit	D
4	76,319MB	Normal	R/W	Local	74,752MB	1	1	-

Figure 5. 27 HDD General

2. Select Advanced on the left bar.

Storage Mode	
Mode	Group ~
Record on HDD Group	Quota
	Group
✓IP Camera	

Check whether the storage mode of the HDD is Group. If not, set it to Group. For detailed information, please refer to *Chapter 11.4 Managing HDD Group*.

3. Select General in the left bar.

Click do enter editing interface.

- **4.** Configuring HDD group.
 - 1) Choose a group number for the HDD group.
 - 2) Click **Apply** and then in the pop-up message box, click **Yes** to save your settings.
 - 3) Click **OK** to back to the upper level menu.

Repeat the above steps to configure more HDD groups.

- 5. Choose the Channels which you want to save the record files and captured pictures in the HDD group.
 - 1) Select Advanced on the left bar.
 - 2) Choose Group number in the dropdown list of Record on HDD Group
 - 3) Check the channels you want to save in this group.
 - 4) Click **Apply** to save settings.

Note: After having configured the HDD groups, you can configure the Recording and Capture settings following the procedure provided in *Chapter 5.2-5.7*.

5.9 Files Protection

Purpose:

You can lock the recorded files or set the HDD property to Read-only to protect the record files from being overwritten.

Protect file by locking the record files:

Steps:

1. Enter Export setting interface.

Menu> Export

	Apply OK Cancel
Figur	e 5. 33 HDD General- Editing

Note: To edit HDD property, you need to set the storage mode of the HDD to Group. See *Chapter Managing HDD Group*.

- 3. Set the HDD property to Read-only.
- 4. Click **OK** to save settings and back to the upper level menu.

Notes:

- 1. You can't save any files in a Read-only HDD. If you want to save files in the HDD, change the property to R/W.
- 2. If there is only one HDD and is set to Read-only, the NVR can't record any files. Only live view mode is available.
- If you set the HDD to Read-only when the NVR is saving files in it, then the file will be saved in next R/W HDD. If there is only one HDD, the recording will be stopped.

Chapter 6 Playback

6.1 Playing Back Record Files

6.1.1 Playing Back by Channel

Purpose:

Play back the recorded video files of a specific channel in the live view mode. Channel switch is supported.

• OPTION 1:

Choose a channel in live view mode using the mouse and click the button in the quick setting toolbar. *Note:* In the instant playback mode, only record files recorded during the last five minutes on this channel will be played back.

Figure 6. 1 Instant Playback Interface

• OPTION 2:

1. Enter the Playback interface.

Mouse: right click a channel in live view mode and select **I** from the menu.

Front Panel: press **PLAY** button to play back record files of the channel under single-screen live view mode. Under multi-screen live view mode, the recorded files of the top-left channel will be played back.

Under multi-screen nive view mode, the recorded mes of the top-feft channel will be played back.

Note: Pressing numerical buttons will switch playback to the corresponding channels during playback process.

2. Playback management.

The toolbar in the bottom part of Playback interface can be used to control playing progress, as shown in Figure 6. 3.

Figure 6. 3 Playback Interface

Click the channel(s) to execute simultaneous playback of multiple channels.

6.1.2 Playing Back by Time

Purpose:

Play back video files recorded in specified time duration. Multi-channel simultaneous playback and channel switch are supported.

Steps:

1. Enter playback interface.

Menu>Playback

2. Check the checkbox of channel(s) in the channel list and then double-click to select a date on the calendar.

•	• Sep → • 2013 •

6.1.3 Playing Back by Event Search

Purpose:

Play back record files on one or several channels searched out by restricting event type (e.g. alarm input and motion detection).

Steps:

1. Enter the Playback interface.

Menu>Playback

- 2. Select the Event in the drop-down list on the top-left side.
- 3. Select Alarm Input or Motion as the event type, edit the Start time and End time.

Figure 6. 8 Alarm Input Search Interface

4. Click Search button to get the search result information. You may refer to the right-side bar for the result.

6.1.4 Playing Back by Tag

Purpose:

Video tag allows you to record related information like people and location of a certain time point during playback. You are also allowed to use video tag(s) to search for record files and position time point.

Before playing back by tag:

1. Enter Playback interface.

Menu>Playback

2. Search and play back the record file(s). Refer to *Chapter 6.1.1* for the detailed information about searching and playback of the record files.

Figure 6.13 Interface of Playback by Time

Click **button to add default tag.**

Click 🖿 button to add customized tag and input tag name.

Note: Max. 64 tags can be added to a single video file.

3. Tag management.

Click button to check, edit and delete tag(s).

4. Playback interface.

The toolbar in the bottom part of Playback interface can be used to control playing process.

Figure 6. 20 Interface of Playback by Log

6.1.6 Playing Back External File

Purpose:

Perform the following steps to look up and play back files in the external devices.

Steps:

1. Enter Tag Search interface.

Menu>Playback

 Select the External File in the drop-down list on the top-left side. The files are listed in the right-side list.

Figure 6. 21 Interface of External File Playback

6.2 Auxiliary Functions of Playback

6.2.1 Playing Back Frame by Frame

Purpose:

Play video files frame by frame, in case of checking image details of the video when abnormal events happen. *Steps:*

• Using a Mouse:

Go to Playback interface.

If you choose playback of the record file: click button **until the speed changes to Single frame and one click** on the playback screen represents playback of one frame.

If you choose reverse playback of the record file: click button \blacksquare until the speed changes to Single frame and one click on the playback screen represents reverse playback of one frame. It is also feasible to use button \blacksquare in toolbar.

• Using the Front Panel:

Rotate and hold the outer ring on Jog Shuttle counter clockwise (for 7700/8600 only) or click the velocity button to set the speed to Single frame. One click on we button, one click on the playback screen or Enter button on the front panel represents playback or reverse playback of one frame.

6.2.2 Digital Zoom

Steps:

- 1. Click the Digital Zoom interface.
- 2. Use the mouse to draw a red rectangle and the image within it will be enlarged up to 16 times.

Figure 6. 22 Draw Area for Digital Zoom

3. Right-click the image to exit the digital zoom interface.

6.2.3 Reverse Playback of Multi-channel

Purpose:

You can play back record files of multi-channel reversely. Up to 16-ch (with 1280*720 resolution) simultaneous reverse playback is supported; up to 4-ch (with 1920*1080P resolution) simultaneous reverse playback is

supported and up to 1-ch (with 2560*1920 resolution) reverse playback is supported.

Note: We use the interface of 7700 series (unless stated) as example to describe the following settings. Steps:

1. Enter Playback interface.

Menu>Playback

2. Check more than one checkboxes to select multiple channels and click to select a date on the calendar.

Figure 6. 23 4-ch Synchronous Playback Interface

3. Click **I** to play back the record files reversely.

6.3 Picture Playback

Purpose:

Search and view captured pictures stored in HDD.

Steps:

1. Enter Playback interface.

Menu>Playback

2. Select the **Picture** in the drop-down list on the top-left side.

Figure 6. 24 Interface of Playback by Picture

- 3. Choose channels, edit start time and end time, and then click Search to enter Search Result interface.
- **4.** Choose a picture you want to view and click **button**.

You can click the **Back** button to back to the search interface.

Chapter 7 Backup

7.1 Backing up Record Files

7.1.1 Backing up by Normal Video Search

Purpose:

The record files can be backup to various devices, such as USB devices (USB flash drives, USB HDDs, USB writer), and SATA writer.

Backup using USB flash drives and USB HDDs

Steps:

1. Enter Export interface.

Menu>Export>Normal

2. Set search condition and click **Search** button to enter the search result interface.

7.1.2 Backing up by Event Search

Purpose:

Back up event-related record files using USB devices (USB flash drives, USB HDDs, USB writer), or SATA writer. Quick Backup and Normal Backup are supported.

Steps:

1. Enter Export interface.

Menu>Export>Event

- 1) Select "Alarm Input" from the dropdown list of Event Type.
- 2) Select the alarm input No. and time.
- 3) Click **Search** button to enter the Search Result interface.

Event				
Event Type	Alarm Input			
Start Time	09-22-2013	00:00:00		
End Time	09-22-2013	23:59:59		
✓Alarm Input No.	Alarm Name	IP Camera Address		
✓ A<-1		Local		
✓ A<-2		Local		
✓ A<-3		Local		
✓ A<-4		Local		
✓ A<-5		Local		

Figure 7.13 Event Search for Backup

- 2. Select record files to export.
 - 1) Select an alarm input in the list and click **Quick Export** button to enter Export interface.
 - Clicking **Details** button will take you to the interface with detailed information of all channels triggered by the selected alarm input.

Note: Event types contain Alarm Input and Motion.

 Clicking Quick Export button will export record files of all channels triggered by the selected alarm input.

	Alarm	Input
Source	Start Time	End Time
☑ D2<-1	07-05-2013 16:50:24	07-05-2013 16:53:56
Total: 1 P: 1/1		
Pre-play	30s	
Post-play	30s	

Figure 7.14 Result of Event Search

4) Click **Details** button to view detailed information of the record file, e.g. start time, end time, file

size, etc.

Event Details

7.1.3 Backing up Video Clips

Purpose:

You may also select video clips to export directly during Playback, using USB devices (USB flash drives, USB HDDs, USB writer) or SATA writer.

Steps:

1. Enter Playback interface.

Please refer to Chapter 7.1 Playing Back Record Files.

- 2. During playback, use buttons 💑 and 🐱 in the playback toolbar to start or stop clipping record file(s).
- **3.** Quit Playback interface after finishing clipping and you will then be prompted to save the clips.

Note: A maximum of 30 clips can be selected for each channel.

Figure 7. 20 Interface of Playback by Time

4. Click Yes to save video clips and enter Export interface, or click No to quit and do not save video clips.

Figure 7. 21 Attention to Video Clip Saving

5. Export.

Click **Export** button and start backup.

Note: If the inserted USB device is not recognized:

- Click the **Refresh** button.
- Reconnect device.
- Check for compatibility from vendor.

You can also format USB flash drive or USB HDDs via the device.

- **4.** Select **Handling** tab to set up alarm response actions of video tampering alarm (please refer to *Chapter Setting Alarm Response Actions*).
- 5. Click the OK button to complete the video tampering settings of the channel.

8.5 Handling Exceptions Alarm

Purpose:

Exception settings refer to the handling method of various exceptions, e.g.

- **HDD Full:** The HDD is full.
- HDD Error: Writing HDD error or unformatted HDD.
- Network Disconnected: Disconnected network cable.
- **IP Conflicted:** Duplicated IP address.
- **Illegal Login:** Incorrect user ID or password.
- Abnormal Record/Capture: No space for saving recorded files or captured images.
- Array Exception: Abnormal virtual disks exist under array.

Note: Array Exception is only supported by 9600-R series NVR.

Steps:

Enter Exception interface of System Configuration and handle various exceptions.

Menu> Configuration> Exceptions

Please refer to Chapter Setting Alarm Response Actions for detailed alarm response actions.

Exception		
Exception Type	HDD Full	v
Audible Warning		
Notify Surveillance Center		
Send Email		
Trigger Alarm Output		

Figure 8. 15 Exceptions Setup Interface

8.6 Setting Alarm Response Actions

Purpose:

Alarm response actions will be activated when an alarm or exception occurs, including Full Screen Monitoring, Audible Warning (buzzer), Notify Surveillance Center, Upload Picture to FTP, Trigger Alarm Output and Send Email.

Full Screen Monitoring

When an alarm is triggered, the local monitor (VGA, HDMI or BNC monitor) display in full screen the video image from the alarming channel configured for full screen monitoring.

If alarms are triggered simultaneously in several channels, their full-screen images will be switched at an interval of 10 seconds (default dwell time). A different dwell time can be set by going to Menu >Configuration>Live View > Full Screen Monitoring Dwell Time.

Auto-switch will terminate once the alarm stops and you will be taken back to the Live View interface.

Note: You must select during "Trigger Channel" settings the channel(s) you want to make full screen monitoring.

Audible Warning

Trigger an audible beep when an alarm is detected.

Notify Surveillance Center

Sends an exception or alarm signal to remote alarm host when an event occurs. The alarm host refers to the PC installed with Remote Client.

Note: The alarm signal will be transmitted automatically at detection mode when remote alarm host is configured. Please refer to *Chapter Configuring Remote Alarm Host* for details of alarm host configuration.

Email Linkage

Send an email with alarm information to a user or users when an alarm is detected. Please refer to *Chapter Configuring Email* for details of Email configuration.

Trigger Alarm Output

Trigger an alarm output when an alarm is triggered.

1. Enter Alarm Output interface.

Menu> Configuration> Alarm> Alarm Output

Select an alarm output and set alarm name and dwell time. Click **Schedule** button to set the arming schedule of alarm output.

Note: If "Manually Clear" is selected in the dropdown list of Dwell Time, you can clear it only by going to Menu> Manual> Alarm.

Alarm Input	Alarm Output	
No.	A->1	٣
	5s

8.7 Triggering or Clearing Alarm Output Manually

Purpose:

Sensor alarm can be triggered or cleared manually. If "Manually Clear" is selected in the dropdown list of dwell time of an alarm output, the alarm can be cleared only by clicking **Clear** button in the following interface.

Steps:

Select the alarm output you want to trigger or clear and make related operations.

Menu> Manual> Alarm

Click Trigger/Clear button if you want to trigger or clear an alarm output.

Click **Trigger All** button if you want to trigger all alarm outputs.

Click **Clear All** button if you want to clear all alarm output.

7700/7600S-P8

Figure 9.1 Network Settings Interface

Note: Dual-NIC configuration is only applicable for 9600/R/X and 8600 series NVR.

3. In the **General Settings** interface, you can configure the following settings: Working Mode, NIC Type, IPv4 Address, IPv4 Gateway, MTU and DNS Server.

If the DHCP server is available, you can click the checkbox of **DHCP** to automatically obtain an IP address and other network settings from that server.

- *Note:* For the 7600/7700NI-SP series NVR, you need to configure the internal NIC address, so that IP addresses are assigned to the cameras connected to the PoE interfaces.
- *Note:* The valid value range of MTU is 500 ~ 9676.
- **4.** After having configured the general settings, click Apply to save the settings.

Working Mode

There are two 10M/100M/1000M NIC cards provided by the 9600NI-ST/RT/XT series device, and it allows the device to work in the Multi-address, Load Balance and Net-fault Tolerance modes.

Multi-address Mode: The parameters of the two NIC cards can be configured independently. You can select LAN1 or LAN2 in the NIC type field for parameter settings.

You can select one NIC card as default route. And then the system is connecting with the extranet the data will be forwarded through the default route.

Net-fault Tolerance Mode: The two NIC cards use the same IP address, and you can select the Main NIC to LAN1 or LAN2. By this way, in case of one NIC card failure, the device will automatically enable the other standby NIC card so as to ensure the normal running of the whole system.

Load Balance Mode: By using the same IP address and two NIC cards share the load of the total bandwidth, which enables the system to provide two Gigabit network capacity.

Working Mode	Net Fault-tolerance	•

9.2 Configuring Advanced Settings

9.2.1 Configuring PPPoE Settings

Purpose:

Your NVR also allows access by Point-to-Point Protocol over Ethernet (PPPoE).

Steps:

1. Enter the Network Settings interface.

Menu >Configuration> Network

2. Select the **PPPoE** tab to enter the PPPoE Settings interface, as shown in Figure 9. 3.

Enable PPPOE	
	_
User Name	
Password	
Confirm	

Figure 9. 3 PPPoE Settings Interface

3. Check the **PPPoE** checkbox to enable this feature.

4. Enter User Name, Password, and Confirm Password for PPPoE access.

- Note: The User Name and Password should be assigned by your ISP.
- 5. Click Apply to save and exit the interface.
- 6. After successful settings, the system asks you to reboot the device to enable the new settings, and the PPPoE dial-up is automatically connected after reboot.

You can go to Menu >Maintenance>System Info >Network interface to view the status of PPPoE connection. Please refer to *Chapter Viewing System Information* for PPPoE status.

9.2.2 Configuring DDNS

Purpose:

If your NVR is set to use PPPoE as its default network connection, you may set Dynamic DNS (DDNS) to be used for network access.

Prior registration with your ISP is required before configuring the system to use DDNS.

Steps:

- Enter the Network Settings interface. Menu >Configuration> Network
- 2. Select the **DDNS** tab to enter the DDNS Settings interface, as shown in Figure 9.4.

Enable DDNS		
DDNS Type	IPServer	
Server Address		
Device Domain Name		
User Name		
Password		
Confirm		

Figure 9. 4 DDNS Settings Interface

- 3. Check the DDNS checkbox to enable this feature.
- **4.** Select **DDNS Type**. Five different DDNS types are selectable: IPServer, DynDNS, PeanutHull, NO-IP and EasyDDNS.
 - IPServer: Enter Server Address for IPServer.

Enable DDNS	
DDNS Type	IPServer ~

• NO-IP:

Enter the account information in the corresponding fields. Refer to the DynDNS settings.

1) Enter Server Address for NO-IP.

- In the NVR Domain Name text field, enter the domain obtained from the NO-IP website (www.no-ip.com).
- 3) Enter the User Name and Password registered in the NO-IP website.

NO-IP	

• HiDDNS:

- 1) The Server Address of the HiDDNS server appears by default: www.hiddns.com.
- 2) Enter the Device Domain Name. You can use the alias you registered in the HiDDNS server or define a new device domain name. If a new alias of the device domain name is defined in the NVR, it will replace the old one registered on the server. You can register the alias of the device domain name in the HiDDNS server first and then enter the alias to the Device Domain Name in the NVR; you can also enter the domain name directly on the NVR to create a new one.

Enable DDNS	✓
DDNS Type	HIDDNS ~

Figure 9. 11 Register the Device

Note: The device name can only contain the lower-case English letter, numeric and '-'; and it must start with the lower-case English letter and cannot end with '-'.

Access the Device via Web Browser or Client Software

After having successfully registered the device on the HiDDNS server, you can access your device via web browser or Client Software with the **Device Domain Name** (**Device Name**).

Task 1: Access the Device via Web Browser

Open a web browser, and enter *http://www.hiddns.com/alias* in the address bar. Alias refers to the **Device Domain Name** on the device or the **Device Name** on the HiDDNS server.

Example: http://www.hiddns.com/nvr

Note: If you mapped the HTTP port on your router and changed it to port No. except 80, you have to enter *http://www.hiddns.com/alias:HTTP port* in the address bar to access the device.

You can refer to Chapter 9.2.10 for the mapped HTTP port No.

Task 2: Access the devices via NVMS7000

For NVMS7000, in the Add Device window, select • HIDDNS and then edit the device information.

Nickname: Edit a name for the device as you want.

Server Address: www.hiddns.com

Device Domain Name: It refers to the **Device Domain Name** on the device or the **Device Name** on the HiDDNS server you created.

User Name: Enter the user name of the device. By default it is admin.

Password: Enter the password of the device. By default it is 12345.

5. Click Apply button to save and exit the interface.

9.2.3 Configuring NTP Server

Purpose:

A Network Time Protocol (NTP) Server can be configured on your NVR to ensure the accuracy of system date/time.

Steps:

1. Enter the Network Settings interface.

Menu >Configuration> Network

2. Select the NTP tab to enter the NTP Settings interface, as shown in Figure 9. 13.

Enable NTP	
Interval (min)	60
NTP Server	
NTP Port	123

- 3. Check the Enable NTP checkbox to enable this feature.
- 4. Configure the following NTP settings:
 - Interval: Time interval between the two synchronizing actions with NTP server. The unit is minute.
 - NTP Server: IP address of NTP server.
 - NTP Port: Port of NTP server.
- 5. Click Apply to save and exit the interface.

Note: The time synchronization interval can be set from1 to 10080min, and the default value is 60min. If the NVR is connected to a public network, you should use a NTP server that has a time synchronization function, such as the server at the National Time Center (IP Address: 210.72.145.44). If the NVR is setup in a more customized network, NTP software can be used to establish a NTP server used for time synchronization.

9.2.4 Configuring SNMP

Purpose:

You can use SNMP protocol to get device status and parameters related information.

Steps:

1. Enter the Network Settings interface.

Menu >Configuration> Network

2. Select the SNMP tab to enter the SNMP Settings interface, as shown in Figure 9. 14.

Enable SNMP	
SNMP Version	٧2 ~
SNMP Port	161
Read Community	public
Write Community	private
Trap Address	
Trap Port	162

Figure 9.14 SNMP Settings Interface

3. Check the SNMP checkbox to enable this feature.

- 4. Configure the following SNMP settings:
 - Trap Address: IP Address of SNMP host.
 - Trap Port: Port of SNMP host.
- 5. Click Apply to save and exit the interface.

Note: Before setting the SNMP, please download the SNMP software and manage to receive the device information via SNMP port. By setting the Trap Address, the NVR is allowed to send the alarm event and exception message to the surveillance center.

9.2.5 Configuring Remote Alarm Host

Purpose:

With a remote alarm host configured, the NVR will send the alarm event or exception message to the host when an alarm is triggered. The remote alarm host must have the Network Video Surveillance software installed.

Steps:

1. Enter the Network Settings interface.

Menu >Configuration> Network

2. Select the More Settings tab to enter the More Settings interface, as shown in Figure 9. 15.

Alarm Host IP	
Alarm Host Port	0
Server Port	8000
HTTP Port	80
Multicast IP	
RTSP Port	554
Enable HTTPS	✓
HTTPS Port	443
Enable High-speed Download	

Figure 9.15 More Settings Interface

3. Enter Alarm Host IP and Alarm Host Port in the text fields.

The **Alarm Host IP** refers to the IP address of the remote PC on which the Network Video Surveillance Software (e.g., NVMS7000) is installed, and the **Alarm Host Port** must be the same as the alarm monitoring port configured in the software.

Alarm Host IP			
Alarm Host Port	0		
	Figure 9.16	6 Configure Alarm Host	

rigure 7. 10 Configure Marin 110.

4. Click Apply to save and exit the interface.

9.2.6 Configuring Multicast

Purpose:

The multicast can be configured to realize live view for more than 128 cameras through network for 9600/R/X series NVR. And for 8600/7700/7600 NVR, using the multicast function, more than 64 cameras are connectable. A multicast address spans the Class-D IP range of 224.0.00 to239.255.255.255. It is recommended to use the IP

address ranging from 239.252.0.0 to 239.255.255.255.

Steps:

1. Enter the Network Settings interface.

Menu >Configuration> Network

- 2. Select the More Settings tab to enter the More Settings interface, as shown in Figure 9. 15.
- **3.** Set **Multicast IP**, as shown in Figure 9. 17. When adding a device to the Network Video Surveillance Software, the multicast address must be the same as the NVR's multicast IP.

Server Port	8000
HTTP Port	80
Multicast IP	239.221.2.78

Figure 9. 17 Configure Multicast

4. Click Apply to save and exit the interface.

Note: The multicast function should be supported by the network switch to which the NVR is connected.

9.2.7 Configuring RTSP

Purpose:

The RTSP (Real Time Streaming Protocol) is a network control protocol designed for use in communication systems to control streaming media servers.

Steps:

1. Enter the Network Settings menu

Menu >Configuration> Network

2. Select the More Settings tab to enter the More Settings menu, as shown in Figure 9. 15.

```
TSP Port
```

- **3.** Enter the RTSP port in the text field of **RTSP Service Port**. The default RTSP port is 554, and you can change it according to different requirements.
- **4.** Click Apply to save and exit the menu.

9.2.8 Configuring Server and HTTP Ports

554

Purpose:

You can change the server and HTTP ports in the Network Settings menu. The default server port is 8000 and the default HTTP port is 80.

Steps:

1. Enter the Network Settings interface.

Menu >Configuration> Network

- 2. Select the More Settings tab to enter the More Settings interface, as shown in Figure 9. 15.
- 3. Enter new Server Port and HTTP Port.

Server Port	8000
HTTP Port	80
Multicast IP	239.221.2.78

Figure 9. 19 Host/Others Settings Menu

- **4.** Enter the Server Port and HTTP Port in the text fields. The default Server Port is 8000 and the HTTP Port is 80, and you can change them according to different requirements.
- 5. Click Apply to save and exit the interface.

Note: The Server Port should be set to the range of 2000-65535 and it is used for remote client software access. The HTTP port is used for remote IE access.

9.2.9 Configuring HTTPS Port

Purpose:

HTTPS provides authentication of the web site and associated web server that one is communicating with, which protects against Man-in-the-middle attacks. Perform the following steps to set the port number of https.

Example:

If you set the port number as 443 and the IP address is 192.0.0.64, you may access the device by inputting *https://192.0.0.64:443* via the web browser.

Steps:

- 1. Enter the Network Settings interface.
 - Menu >Configuration> Network
- 2. Select the More Settings tab to enter the More Settings interface, as shown in Figure 9. 15.
- 3. Check the checkbox of Enable HTTPS.

- 4. Enter the **HTTPS Port**.
- 5. Click the Apply button to save and exit the interface.

9.2.10 Configuring Email

Purpose:

The system can be configured to send an Email notification to all designated users if an alarm event is detected, etc., an alarm or motion event is detected or the administrator password is changed.

Before configuring the Email settings, the NVR must be connected to a local area network (LAN) that maintains an SMTP mail server. The network must also be connected to either an intranet or the Internet depending on the location of the e-mail accounts to which you want to send notification.

Steps:

1. Enter the Network Settings interface.

Menu >Configuration> Network

2. Set the IPv4 Address, IPv4 Subnet Mask, IPv4 Gateway and the Preferred DNS Server in the Network

Settings menu, as shown in Figure 9. 21.

Working Mode	Net Fault-tolerance	
Select NIC	bond0	
NIC Type	10M/100M/1000M Self-adaptive	
Enable DHCP		
IPv4 Address	172 .6 .21 .159	
IPv4 Subnet Mask	255 .255 .255 .0	
IPv4 Default Gateway	172 .6 .21 .1	
IPv6 Address 1	fec0::a:240:48ff:fe62:dcd/64	
IPv6 Address 2	2002:ac06:1578:a:240:48ff:fe62:dcd/64	
IPv6 Default Gateway		
MAC Address	00:40:48:62:0d:cd	
MTU(Bytes)	1500	
Preferred DNS Server		
Alternate DNS Server		
Main NIC	LAN1	

Figure 9.21 Network Settings Interface

- **3.** Click Apply to save the settings.
- 4. Select the Email tab to enter the Email Settings interface.

Enable Server Authentication	
User Name	
Password	
SMTP Server	xxx.smtp.com
SMTP Port	25
Enable SSL	
Sender	name1
Sender's Address	name1@xxx.com
Select Receivers	Receiver 1 ~
Receiver	name2
Receiver's Address	name2@xxx.com
Enable Attached Picture	
Interval	2s ~

Figure 9.22 Email Settings Interface

5. Configure the following Email settings:

Enable Server Authentication (optional): Check the checkbox to enable the server authentication feature.

User Name: The user account of sender's Email for SMTP server authentication.

Password: The password of sender's Email for SMTP server authentication.

SMTP Server: The SMTP Server IP address or host name (e.g., smtp.263xmail.com).

SMTP Port No.: The SMTP port. The default TCP/IP port used for SMTP is 25.

Enable SSL (optional): Click the checkbox to enable SSL if required by the SMTP server.

Sender: The name of sender.

Sender's Address: The Email address of sender.

Select Receivers: Select the receiver. Up to 3 receivers can be configured.

Receiver: The name of user to be notified.

Receiver's Address: The Email address of user to be notified.

Enable Attached Pictures: Check the checkbox of **Enable Attached Picture** if you want to send email with attached alarm images. The interval is the time of two adjacent alarm images. You can also set SMTP port and enable SSL here.

Interval: The interval refers to the time between two actions of sending attached pictures.

E-mail Test: Sends a test message to verify that the SMTP server can be reached.

6. Click Apply button to save the Email settings.

7. You can click **Test** to test whether your Email settings work. The corresponding Attention message box will pop up. Refer to Figure 9. 23.

9.2.11 Configuring UPnPTM

Purpose:

Universal Plug and Play (UPnPTM) can permit the device seamlessly discover the presence of other network devices on the network and establish functional network services for data sharing, communications, etc. You can use the UPnPTM function to enable the fast connection of the device to the WAN via a router without port mapping. *Before you start:*

bejore you suri:

If you want to enable the UPnP[™] function of the device, you must enable the UPnP[™] function of the router to which your device is connected. When the network working mode of the device is set as multi-address, the Default Route of the device should be in the same network segment as that of the LAN IP address of the router.

Steps:

- 1. Enter the Network Settings interface.
 - Menu > Configuration > Network
- 2. Select the UPnP tab to enter the UPnP[™] interface.

Enable UPnP								
Mapping Type			Manual					
Port Type	Edit	Exter	nal Port	Mapping IP Addres	s í	Port	Status	
Server Port	1	8000		0.0.0.0		8000	Inactive	
HTTP Port	1	80		0.0.0.0		80	Inactive	
RTSP Port	1	554		0.0.0.0		554	Inactive	
HTTPS Port	1	443		0.0.0.0		443	Inactive	
								Refresh

- 3. Check \blacksquare checkbox to enable UPnPTM.
- 4. Select the Mapping Type as Manual or Auto in the drop-down list.

Task1: Auto

If you select Auto, the Port Mapping items are read-only, and the external ports are set by the router automatically.

Steps:

- 1) Click **Apply** button to save the settings.
- 2) You can click **Refresh** button to get the latest status of the port mapping.

Mapping Type		Auto				
Port Type	Edit	External Port	Mapping IP Address	Port	Status	
Server Port	1	43728	172.6.21.31	8000	Active	
HTTP Port	1	31397	172.6.21.31	80	Active	
RTSP Port	1	59826	172.6.21.31	554	Active	
HTTPS Port	1	31231	172.6.21.31	443	Active	

Figure 9. 25 UPnP[™] Settings Finished-Auto

Task2: Manual

If you select Manual as the mapping type, you can edit the external port on your demand by clicking it to activate the External Port Settings dialog box.

Steps:

1) Click i to activate the External Port Settings dialog box. Configure the external port No. for server port, http port, RTSP port and https port respectively.

Notes:

- 1) You can use the default port No., or change it according to actual requirements.
- 2) External Port indicates the port No. for port mapping in the router.

3) The value of the RTSP port No. should be 554 or between 1024 and 65535, while the value of the other ports should be between 1 and 65535 and the value must be different from each other. If multiple devices are configured for the UPnPTM settings under the same router, the value of the port No. for each device should be unique.

External Port Settings							
Port Type	Server Port						
External Port	8001						
	ОК	Cancel					

Figure 9. 26 External Port Settings Dialog Box

- 2) Click **Apply** button to save the settings.
- 3) You can click **Refresh** button to get the latest status of the port mapping.

Enable UPnP		~					
Mapping Type M			Manual				
Port Type	Edit	External Port	Mapping IP Address	Port	Status		
Server Port	1	8002	172.6.21.31	8000	Active		
HTTP Port	1	80	172.6.21.31	80	Active		
RTSP Port	1	554	172.6.21.31	554	Active		
HTTPS Port	2	443	172.6.21.31	443	Active		
						Refresh	

Figure 9. 27 UPnP[™] Settings Finished-Manual

9.2.12 Configuring High-speed Download

Purpose:

You can enable the High-speed Download function to widen the outgoing bandwidth of the device. In this way you can speed up the download of record files through IE browser or CMS software.

Note: If you enable the high-speed download function, the local menu operation will be affected. It is recommended to disable this function after finishing the remote downloading of record files.

Steps:

1. Enter the Network Settings interface.

Menu >Configuration> Network

- 2. Select the More Settings tab to enter the More Settings interface, as shown in Figure 9. 15.
- **3.** Check the checkbox of **Enable High-speed Download**. And click the **OK** button in the pop-up message box to confirm the settings.

Enable High-speed Download

Figure 9. 28 High-speed Download Settings Menu

Figure 9. 29 Message Box of High-speed Download

4. Click Apply button to save and exit the interface.

9.3 Checking Network Traffic

Purpose:

You can check the network traffic to obtain real-time information of NVR such as linking status, MTU, sending/receiving rate, etc.

Steps:

1. Enter the Network Traffic interface.

Menu >Maintenance>Net Detect

Figure 9. 30 Network Traffic Interface

2. You can view the sending rate and receiving rate information on the interface. The traffic data is refreshed every 1 second.

9.4 Configuring Network Detection

Purpose:

You can obtain network connecting status of NVR through the network detection function, including network delay, packet loss, etc.

9.4.1 Testing Network Delay and Packet Loss

Steps:

- Enter the Network Traffic interface. Menu >Maintenance>Net Detect
- 2. Click the Network Detection tab to enter the Network Detection menu, as shown in Figure 9. 31.

Network Delay, Packet Loss Test									
Select NIC	LAN1								
Destination Address	172.6.23.6			Test					
Network Packet Export									
Device Name				Refresh					
LAN1	172.6.21.64	2,789Kbps		Export					

- 3. Enter the destination address in the text field of **Destination Address**.
- 4. Click **Test** to start testing network delay and packet loss. The testing result pops up on the window. If the testing is failed, the error message box will pop up as well. Refer to Figure 9. 32.

Result	Attention
Average delay: 0 ms Packet loss rate: 0%	The destination is unreachable. OK OK

Figure 9. 32 Testing Result of Network Delay and Packet Loss

9.4.2 Exporting Network Packet

Purpose:

By connecting the NVR to network, the captured network data packet can be exported to USB-flash disk, SATA/eSATA, DVD-R/W and other local backup devices.

Steps:

1. Enter the Network Traffic interface.

Menu >Maintenance>Net Detect

- 2. Click the Network Detection tab to enter the Network Detection interface.
- 3. Select the backup device from the dropdown list of Device Name, as shown in Figure 9. 33.

Note: Click Refresh if the connected local backup device cannot be displayed. When it fails to detect the backup device, please check whether it is compatible with the NVR. You can format the backup device if the format is incorrect.

Network Delay, Packet L	.oss Test		
Select NIC	LAN1		
Destination Address	172.6.23.6		Test
Network Packet Export			
Device Name	USB1-1		Refresh
LAN1	172.6.21.64	2,740Kbps	Export

- 4. Click Export to start exporting.
- 5. After the exporting is complete, click **OK** to finish the packet export, as shown in Figure 9. 34.

Packet exporting	
	Attention
	Packet export succeeded.
Cancel	OK

Figure 9.34 Packet Export Attention

Note: Up to 1M data can be exported each time.

9.4.3 Checking the network status

Purpose:

You can also check the network status and quick set the network parameters in this interface. *Steps:*

Click

Status button on the bottom right corner of the page.

Traffic	Network Dete	ction	Network Stat.				
Network	Delay, Packet	Loss T	est				
Select I		LAN1					
Destina	ition Address	192,1	68,1.230				Test
Network	Packet Export						
Device							Refresh
LAN1	192	.168.1.	118	2Kbps			Export
				Status	Networ	k	Back

Figure 9.35 Network status checking

If the network is normal the following message box pops out.

Figure 9.36 Network status checking result

Network

to

If the message box pops out with other information instead of this one, you can click show the quick setting interface of the network parameters.

	Network	
Working Mode	Net Fault-tolerance	
Select NIC	bond0	
NIC Type	10M/100M/1000M Self-adaptive	
Enable DHCP		
IPv4 Address	172 .6 .21 .87	
IPv4 Subnet Mask	255 .255 .255 .0	
IPv4 Default Gateway	172 .6 .21 .1	
Preferred DNS Server	192.0.0.200	
Alternate DNS Server		
Main NIC	LAN1	
	Apply OK Cancel	

Figure 9. 37 Network parameters configuration

Note: Dual-NIC configuration is only applicable for the 9600/R/X and 8600 series NVR.

9.4.4 Checking Network Statistics

Purpose:

You can check the network status to obtain the real-time information of NVR.

Steps:

1. Enter the Network Detection interface.

Menu>Maintenance>Net Detect

2. Choose the Network Stat. tab.

Туре	Bandwidth	
IP Camera	9,216Kbps	
Remote Live View	Obps	
Remote Playback	Obps	
Net Receive Idle	31Mbps	
Net Send Idle	240Mbps	
	Refres	h

- **3.** Check the bandwidth of IP Camera, bandwidth of Remote Live View, bandwidth of Remote Playback, bandwidth of Net Receive Idle and bandwidth of Net Send Idle.
- 4. You can click Refresh to get the newest status.

Chapter 10 RAID

Notes: This chapter is applicable for 9600-R series only.

10.1 Configuring Array and Virtual Disk

Purpose:

RAID (redundant array of independent disks) is a storage technology that combines multiple disk drive components into a logical unit. A RAID setup stores data over multiple hard disk drives to provide enough redundancy so that data can be recovered if one disk fails. Data is distributed across the drives in one of several ways called "RAID levels", depending on what level of redundancy and performance is required. The 9600-R is capable of realizing Redundant Array of Independent Disk, supporting RAID0, RAID1, RAID5 and RAID10.

Before you start:

Please install the HDD(s) properly and it is recommended to use the same enterprise-level HDDs (including model and capacity) for array creation and configuration so as to maintain reliable and stable running of the disks. *Introduction:*

The 9600-R series can store the data (such as record, picture, log information) in the HDD only after you have created the virtual disk or you have configured network HDD (refer to *Chapter 11.2 Managing Network HDD*). Our device provides two ways for creating the virtual disk, including one-touch configuration and manual configuration. The following flow chart shows the process of creating virtual disk.

10.1.1 One-touch Configuration

Purpose:

Through one-touch configuration, you can quickly create the disk array and virtual disk. By default, the array type to be created is RAID 5.

Steps:

- 1. Enter the Physical Disk Settings interface.
 - Menu > HDD > RAID > Physical Disk

<u>Phys</u>	ical Di	<mark>sk</mark> Ar	ray	Virtual Disk	Firmware			
	۱o.	Сарас	ity Arr	ay	Туре	Status	Model	Hot Sp
	1	931.510	ЭВ		Normal	Functional	ST31000340NS	
	3	931.510	ЭВ		Normal	Functional	ST31000526SV	
	5	931.510	€B		Normal	Functional	WDC WD10EVVS-6	
	7	931.510	€B		Normal	Functional	WDC WD10EVVS-6	
							One-touch C	Create

Figure 10. 2 Physical Disk Settings Interface

Click One-touch C... to enter the One-touch Array Configuration interface.
 Note: As the default array type is RAID 5, at least 3 HDDs must be installed in you device.

One-touch Array Configuration									
Array Name									
		ок		Cancel					

Figure 10. 3 One-touch Array Configuration

- 3. Edit the array name in the Array Name text filed and click OK button start configuring array. *Note:* If you install 4 HDDs or above for one-touch configuration, a hot spare disk will be set by default. It is recommended to set hot spare disk for automatically rebuilding the array when the array is abnormal.
- 4. When the array configuration is completed, click **OK** button in the pop-up message box to finish the settings.
- 5. You can click **Array** tab to view the information of the successfully created array.

Notes:

- 1) By default, one-touch configuration creates an array and a virtual disk.
- 2) If the capacity of the array created through one-touch configuration is greater than 16TB, two arrays and two virtual disks will be created.

Physical Disk	Array	Virtual Dis	sk Firmwa	are					
No. Name	Free S	pace Phys	sic Hot	Status	Level	Re	Mig	Del	Task
1 RAID	0/1862	2G 13	75	Functi	RAID 5	1	8	Π	None

Figure 10. 4 Array Settings Interface

6. Click Virtual Disk tab to view the automatically created virtual disk.

Notes:

1) By default, one-touch configuration adopts foreground initialization to initialize the virtual disk. By using foreground initialization, the virtual disk can be used only after the initialization is complete.

2) If the capacity of the array created through one-touch configuration is greater than 16TB, two arrays and two virtual disks will be created.

Phys	ical Disk	Array	Virtual Disk	Firmwar	e				
No	Name	C	ap Array	Status	Туре	Repair	Delete	Task	
1	vd_RAID	18	62G RAID	Functio	RAID 5	-	Ť	Initialize (Foreground)(
	Figure 10. 5 Virtual Disk Settings Interface								

 After the foreground initialization of the virtual disk is complete, the virtual disk will display in the HDD Information interface (Menu>HDD>General). For operation guide of initializing the virtual disk, please refer to *Chapter 11.1 Initializing HDDs*.

Note: For configuring hot spare disk manually, please refer to steps 12-15 of Chapter 10.1.2.

10.1.2 Manually Creating Array and Virtual Disk

Purpose:

You can manually create the array of RAID 0, RAID 1, RAID 5 and RAID 10.

Note: In this section, we take RAID 5 as an example to describe the manual configuration of array and virtual disk. *Steps:*

1. Enter the Physical Disk Settings interface.

 $Menu > HDD > RAID > Physical \ Disk$

Phys	sical Di	isk_	Array	Virtual Disk	Firmware	•		
	No.	Ca	pacity	Array	Туре	Status	Model	Hot Sp

Physical Disk	∎1 ∎3	■5	■ 7	
Array Capacity (Estima	ted): 0GB			
			ОК	Cancel
	070 1			

Figure 10. 7 Create Array Interface

3. Edit the Array Name; set the RAID Level to RAID 0, RAID 1, RAID 5 or RAID 10; select the Physical Disk that you want to configure array.

Notes:

- 1) If you choose RAID 0, at least 2 HDDs must be installed.
- 2) If you choose RAID 1, 2 HDDs need to be configured for RAID 1.
- 3) If you choose RAID 5, at least 3 HDDs must be installed.
- 4) If you choose RAID 10, 4/6/8 HDDs need to be configured for RAID 10.
- 4. Click **OK** button to create array.

Note: If the number of HDDs you select is not compatible with the requirement of the RAID level, the error message box will pop up.

Figure 10.8 Error Message Box

5. You can click **Array** tab to view the successfully created array.

Phys	ical Disk	Array	Virtua	al Disk	Firmwa	re

1	Array01	931/9	31G	35		Functi	RAID 1	1	Ū,	Ô	None

Click to select an array and click Creat Vd button to enter the Create Virtual Disk interface.
 Note: The device supports creating at most 8 virtual disks.

	Create Virtual Disk		
Array	RAID5		
Name			
Capacity(GB)			
Initialization Type	Initialize (Background)		
Information of Array Ca	apacity		
De	lete Apply	ок	Cancel

7. Edit the name of the virtual disk, set the capacity for the virtual disk and select the initialization type for the virtual disk.

Notes:

- 1) You can also click the **Information of Array Capacity** area to set the remaining capacity of the array for the disk.
- 2) It is recommended to create one virtual disk of an array.
- 3) At least 100GB capacity must be configured for each virtual disk.
- 4) There are three initialization types, including Background, Foreground and Fast.

Fast (Not Recommended): The fast initialization usually takes short time and only initializes part of the data of the virtual disk, and cannot detect the bad sector.

Foreground (Recommended): By using foreground initialization, the virtual disk will be initialized

totally and the bad sector of the hard disks can be detected and repaired. The virtual disk can be used only after the initialization is complete.

Background: The background initialization can synchronize the disks, and detect and repair the bad sector of the disks. During the background initialization, the virtual disk is allowed to be used.

- 8. Click Apply button to save the settings and click OK button to return to Array Settings interface
- **9.** Click Virtual Disk tab to enter the Virtual Disk interface. The successfully created virtual disk will be listed on the interface.

13. Select a disk and click **I** to enter the Set Hot Spare interface.

	Set Hot Spare)	
Physical Disk	1		
Hot Spare Type			
 Global Hot Spare 			
RAID5 (RAID 5)			
		ок	Cancel

Figure 10. 15 Set Hot Spare Interface

14. Set the hot spare type of the selected HDD to Global Hot Spare or the specified hot spare for the existing array.

Global Hot Spare: It can be used as the hot spare for any array created in the system.

Array Hot Spare (e.g. RAID 5): It can be used as the hot spare for the specified array only.

15. Click OK button to finish the settings.*Note:* When the auto-rebuild function is enabled, the hot spare disk will be automatically used for array rebuilding if the virtual disk is in Degraded status.

10.2 Rebuilding Array

Purpose:

The working status of array includes Functional, Degraded and Offline. By viewing the array status, you can take immediate and proper maintenance for the disks so as to ensure the high security and reliability of the data stored in the disk array.

When there is no disk loss in the array, the working status of array will change to Functional; when the number of lost disks has exceeded the limit, the working status of array will change to Offline; in other conditions, the working status is Degraded.

When the virtual disk is in Degraded status, you can restore it to Functional by array rebuilding.

10.2.1 Automatically Rebuilding Array

Purpose:

When the virtual disk is in Degraded status, the device can start rebuilding the array automatically with the hot spare disk to ensure the high security and reliability of the data.

Before you start:

Enable the *Auto-rebuild* in Firmware Settings interface (Menu>HDD>RAID>Firmware) and the hot spare disk has been configured.

Steps:

 Enter the Array Settings interface. The status of the array is Disk Loss. Since the hot spare disk is configured and *Auto-rebuild* function is enabled. The hot spare disk will be automatically used for array rebuilding. Menu > HDD > RAID > Array

Figure 10. 18 Set Hot Spare Disk Interface

10.2.2 Manually Rebuilding Array

Purpose:

If you do not enable the Auto-rebuild in Firmware Settings interface (Menu>HDD>RAID>Firmware) or the hot spare disk has not been configured, then you can rebuild the array manually to restore the array when the virtual disk is in Degraded status.

Steps:

1. Enter the Array Settings interface. The disk 3 is lost.

Menu > HDD > RAID > Array

F	Physi	cal Disk	Array	Virtua	l Disk	Firmwar	e						
	No.	Name	Free	Space	Physic	Hot	Status	Level	Re	Mig	Del	Task

Figure 10. 20 Virtual Disk Interface

3. Click Array tab to back to the Array Settings interface and click 📝 to configure the array rebuild.

	Rebuild Array		
Array Name	RAID5		
RAID Level	RAID 5		
Array Disk	57		
Physical Disk	●1		
		ОК	Cancel

Note: At least one available physical disk should exist for rebuilding the array.

Figure 10. 21 Rebuild Array Interface

- 4. Select the available physical disk and click **OK** button to confirm to rebuild the array.
- 5. The "Do not unplug the physical disk when it is under rebuilding" message box pops up. Click **OK** button to start rebuilding.
- 6. You can enter the Array Settings interface and Virtual Disk interface to view the rebuilding status.
- 7. After rebuilding successfully, the array and virtual disk will restore to Functional.

Note: It is recommended to enable the *Auto-rebuild* function and set the hot spare disk for automatically rebuilding the array.

10.3 Repairing Virtual Disk

Purpose:

When the disk cannot display in the HDD Information interface while the virtual disk can still show in the Array Settings interface, you have to repair the virtual disk.

Note: If the virtual disk is under foreground initialization, the repairing cannot be done.

Steps:

1. Enter the Virtual Disk interface.

Menu > HDD >	PAID >	Virtual Dick
	KAID >	VIIIUAI DISK

No. Name Cap., Array Status Type Repair Delete Task 1 vd_RAID5 1862G RAID5 Functio RAID 5 📝 📅 None	Physical Disk	Array Virtual Disk	Firmware

	1 vd_RAID5	1862G RAID5	Functio RAID 5	1	None

Figure 10. 22 Virtual Disk Interface

2. Click i to repair the virtual disk. After successfully repairing, the following message box will pop up. Click **OK** button to finish the settings.

Figure 10. 23 Repairing Virtual Disk Successfully

The disk shows again in the HDD Information interface (Menu>HDD>General).

HDD Inf	ormation							
L	Capacity	Status	Property	Туре	Free Space	Gr	Edit	D
1	1,862GB	Uninitialized	R/W	Array	0MB	1	-	-

Figure 10. 24 HDD Information Interface

10.4 Deleting Array / Virtual Disk

Note: Before deleting the array, the virtual disk(s) existing under this array must be deleted first. Deleting array and virtual disk will cause to delete all the data saved in the disk.

10.4.1 Deleting the Virtual Disk

Steps:

1. Enter the Virtual Disk interface.

Menu>HDD>RAID>Virtual Disk

Figure 10. 25 Virtual Disk Interface

2. Select a virtual disk and click 🔟 to delete the virtual disk.

Figure 10. 26 Confirm Virtual Disk Deletion

In the pop-up message box, click Yes button to confirm the virtual disk deletion.
 Note: Deleting virtual disk will cause to delete all the data saved in the disk.

10.4.2 Deleting the Array

Note: If all the virtual disks existing under an array have been deleted, then you can delete that array. *Steps:*

 Enter the Array Settings interface. Menu>HDD>RAID>Array

Name	Free S	Space F	^{>} hysic	Hot	Status	Level	Re	Mig	Del	Task
RAID5	1762/	186 2	257		Functi	RAID 5	1	≥	İ	None

2. Select an array and click 🔟 to delete the array.

In the pop-up message box, click Yes button to confirm the array deletion.
 Note: Deleting array will cause to delete all the data in the array.

10.5 Migrating and Extending

Purpose:

When the remaining storage space is lower than the actual needs, you can take array migration and online extend to enlarge the capacity of the virtual disk.

Before you start:

At least one available physical disk should exist for the array migration.

Steps:

1. Enter the Physical Disk Settings interface. At least one available physical disk should exist for the array migration.

Menu>HDD>RAID>Physical Disk

F	Physical	Disk Arra	y Virtual Disk	Firmware	1

Figure 10. 33 Virtual Disk Interface

- 6. Reboot the device to take effect of the new settings after the migration process finishes.
- 7. Enter the HDD Information interface after rebooting. Select an expandable virtual disk and click **Expand** button to expand the capacity of the virtual disk.

HDD Inf	ormation										
L	Capacity	Status	Property	Туре	Free Space	Gr	Edit	D			
v 1	150GB	Normal/Expansion	nR/W	Array	84,992MB	1	-	-			
	Figure 10. 34 HDD Information Interface										

8. In the pop-up message box, click **OK** button to start expanding.

Figure 10.35 Message Box for Expansion

9. After expanding finished, the following message box pops up. Click **OK** button to finish the settings.

Expand	
HDD1 Expansion is complete.	
	01/
	ОК

Figure 10. 36 Message Box for Expanding Finished

Note: After RAID migration and capacity expansion, the expanded capacity for each virtual disk can be calculated by the following formula: Expanded VD capacity=(Original VD Capacity / Original Array Capacity) * Newly Added Capacity of Hard Disk.

Example: The capacity of the original array is 2TB and two virtual disks exist under this array: VD1 (100GB) and VD2 (200GB). If you migrate the array with a 1TB HDD, then after migration and expanding, the expanded VD1 capacity is 50GB, that is 50GB = (100GB/2TB)*1TB. And the expanded VD2 capacity is 100GB, that is 100GB = (200GB/2TB)*1TB.

10.6 Upgrading Firmware

Purpose:

You can view the information of the firmware and upgrade the firmware by local backup device or remote FTP server.

Steps:

1. Enter the Firmware interface to check the information of the firmware, including the version, maximum physical disk quantity, maximum array quantity, auto-rebuild status, etc.

Physical Disk Array Virt	ual Disk <u>Firmware</u>
Version	1.1.0.1919
Physical Disk Count	8
Array Count	8
Virtual Disk Count	8
RAID Level	0 1 5 10
Hot Spare Type	Global Hot Spare, Array Hot Spare
Support Rebuild	Yes
Support Migration	Yes
Auto-rebuild	
	Upgrade Apply Back

Figure 10. 37 Firmware Interface

2. You can click **Upgrade** button to upgrade the firmware. Local upgrade and FTP upgrade are available. Since the upgrading process of the firmware is the same as that of the device firmware, you can refer to *Chapter 13.4* for detailed information.

Note: Please contact the dealer immediately if the device cannot work properly after upgrading.

Local Upgrade	FTP Upgrade			
Device Name				Refresh
Name	Siz	е Туре	Edit Date	Del Play
			Upgrade	Cancel

Figure 10. 38 Upgrade the Firmware

Chapter 11 HDD Management

11.1 Initializing HDDs

Purpose:

A newly installed hard disk drive (HDD) must be initialized before it can be used with your NVR.

Note: A message box pops up when the NVR starts up if there exits any uninitialized HDD.

Figure 11.1 Message Box of Uninitialized HDD

Click **Yes** button to initialize it immediately or you can perform the following steps to initialize the HDD. *Steps:*

1. Enter the HDD Information interface.

Menu > HDD> General

HDD Inf	formation_							
L	Capacity	Status	Property	Туре	Free Space	Gr	Edit	D
5	76,319MB	Normal	R/W	Local	75,776MB	1	2	-

Note: Initializing the HDD will erase all data on it.

11.2 Managing Network HDD

Purpose:

You can add the allocated NAS or disk of IP SAN to NVR, and use it as network HDD.

Steps:

1. Enter the HDD Information interface.

Menu > HDD>General

HDD Inf	formation_							
L	Capacity	Status	Property	Туре	Free Space	Gr	Edit	D
5	76,319MB	Normal	R/W	Local	75,776MB	1	1	-

Figure 11. 6 HDD Information Interface

2. Click the Add button to enter the Add NetHDD interface, as shown in Figure 11.7.

	Add NetHDD							
NetHDD	NetHDD 1 ~							
Туре	NAS ~							
NetHDD IP Address NetHDD Directory								
	Search OK Cancel							

Figure 11.7 HDD Information Interface

3. Add the allocated NetHDD.

5.

- 4. Select the type to NAS or IP SAN.
 - Configure the NAS or IP SAN settings.

• Add NAS disk:

- 1) Enter the NetHDD IP address in the text field.
- 2) Click the **Search** button to search the available NAS disks.
- 3) Select the NAS disk from the list shown below.

Or you can just manually enter the directory in the text field of NetHDD Directory.

4) Click the **OK** button to add the configured NAS disk.

Note: Up to 8 NAS disks can be added.

NetHDD 1

1 7	79,968MB	Normal	R/W	NAS	79,872MB	1	1	T

Figure 11. 10 Initialize Added NetHDD

11.3 Managing eSATA

Purpose:

When there is an external eSATA device connected to NVR, you can configure eSATA for the use of Record/Capture or Export, and you can manage the eSATA in the NVR.

Steps:

1. Enter the Advanced Record Settings interface.

Menu >Record>Advanced

2. Select the eSATA type to Export or Record/Capture from the dropdown list of eSATA.

Export: use the eSATA for backup. Refer to *Backup using eSATA HDDs* in *Chapter Backing up by Normal Video Search* for operating instructions.

Record/Capture: use the eSATA for record/capture. Refer to the following steps for operating instructions.

Overwrite	✓	
eSATA	eSATA1	
Usage	Record/Capture	

Figure 11. 11 Set eSATA Mode

- 3. When the eSATA type is selected to Record/Capture, enter the HDD Information interface. Menu > HDD>General
- 4. Edit the property of the selected eSATA, or initialize it is required.

Note: Two storage modes can be configured for the eSATA when it is used for Record/Capture. Please refer to *Chapter Managing HDD Group* and *Chapter Configuring Quota Mode* for details.

Label	Capacity	Status	Property	Туре	Free Space	Gro	Edit	Del

25	931.51GB	Normal	R/W	eSATA	894GB	1	1	Û

Figure 11. 12 Initialize Added eSATA

11.4 Managing HDD Group

11.4.1 Setting HDD Groups

Purpose:

Multiple HDDs can be managed in groups. Video from specified channels can be recorded onto a particular HDD group through HDD settings.

Steps:

1. Enter the Storage Mode interface.

Menu > HDD > Advanced

2. Set the Mode to Group, as shown in Figure 11. 13.

Storage Mode	
Mode	Group 🗸
	Quota
Record on HDD Group	Group
✓IP Camera	D1

Figure 11. 13 Storage Mode Interface

3. Click the Apply button and the following Attention box will pop up.

Figure 11. 14 Attention for Reboot

- 4. Click the Yes button to reboot the device to activate the changes.
- After reboot of device, enter the HDD Information interface.
 Menu > HDD> General
- 6. Select HDD from the list and click icon to enter the Local HDD Settings interface, as shown in Figure 11. 15.

	L	ocal HDD Sei	ttings	
HDD No.	1			
HDD Property				
● R/W				
Read-only				
Redundancy				
Group		●3 ●4) ●11 ●12		
HDD Capacity	931.5	1GB		
		Apply	ок	Cancel

Figure 11. 15 Local HDD Settings Interface

- 7. Select the Group number for the current HDD.
- *Note:* The default group No. for each HDD is 1.
- 8. Click the OK button to confirm the settings.

Figure 11. 16 ConfirmHDD Group Settings

9. In the pop-up Attention box, click the Yes button to finish the settings.

11.4.2 Setting HDD Property

Purpose:

The HDD property can be set to redundancy, read-only or read/write (R/W). Before setting the HDD property,

please set the storage mode to Group (refer to step1-4 of Chapter Setting HDD Groups).

A HDD can be set to read-only to prevent important recorded files from being overwritten when the HDD becomes full in overwrite recording mode.

When the HDD property is set to redundancy, the video can be recorded both onto the redundancy HDD and the R/W HDD simultaneously so as to ensure high security and reliability of video data.

Steps:

- 1. Enter the HDD Information interface.
 - Menu > HDD> General
- 2. Select HDD from the list and click the 📝 icon to enter the Local HDD Settings interface, as shown in Figure 11. 17.

	Local HDD Settings
HDD No.	5
HDD Property	
● R/W	
Read-only	
Redundancy	
	$\begin{array}{cccccccccccccccccccccccccccccccccccc$
HDD Capacity	931GB
	Apply OK Cancel

- 3. Set the HDD property to R/W, Read-only or Redundancy.
- 4. Click the **OK** button to save the settings and exit the interface.
- 5. In the HDD Information menu, the HDD property will be displayed in the list.

Note: At least 2 hard disks must be installed on your NVR when you want to set a HDD to Redundancy, and there is one HDD with R/W property.

11.5 Configuring Quota Mode

Purpose:

Each camera can be configured with allocated quota for the storage of recorded files or captured pictures.

Steps:

1. Enter the Storage Mode interface.

Menu > HDD > Advanced

2. Set the Mode to Quota, as shown in Figure 11. 18.

Note: The NVR must be rebooted to enable the changes to take effect.

Storage Mode		
Mode	Quota	•
Camera	IP Camera 1	•
Used Record Capacity	1,024MB	
HDD Capacity (GB)	74	
Max. Record Capacity (G.	. 0	
🛆 Free Quota Space 74 G	βB	

Figure 11. 18 Storage Mode Settings Interface

- **3.** Select a camera for which you want to configure quota.
- 4. Enter the storage capacity in the text fields of Max. Record Capacity (GB) and Max. Picture Capacity (GB), as shown in Figure 11. 19.

Storage Mode								
Mode	Quota	Quota ~

		-	Enter ESC					

Figure 11. 19 Configure Record/Picture Quota

5. You can copy the quota settings of the current camera to other cameras if required. Click the **Copy** button to enter the Copy Camera menu, as shown in Figure 11. 20.

	_	Сор	y to			_
■ Ali	■ 1 ■ 7	■2	■3	■4	■5	6
				ок		Cancel

Figure 11. 20 Copy Settings to Other Camera(s)

- **6.** Select the camera (s) to be configured with the same quota settings. You can also click the checkbox of IP Camera to select all cameras.
- 7. Click the OK button to finish the Copy settings and back to the Storage Mode interface.
- 8. Click the Apply button to apply the settings.

Note: If the quota capacity is set to 0, then all cameras will use the total capacity of HDD for record and picture capture.

11.6 Checking HDD Status

Purpose:

You may check the status of the installed HDDs on NVR so as to take immediate check and maintenance in case of HDD failure.

Checking HDD Status in HDD Information Interface

Steps:

1. Enter the HDD Information interface.

Menu > HDD>General

2. Check the status of each HDD which is displayed on the list, as shown in Figure 11. 21.

HDD Int	formation									
L	Capacity	Status		Property		Туре	Free Space	Gr	Edit	D
5	76,319MB	Normal		R/W		Local	74,752MB		2	-
Total	Capacity		76,319ME	3						
Free S			74,752ME							
					A	dd	Init		Вас	k

Figure 11. 21 View HDD Status (1)

Note: If the status of HDD is *Normal* or *Sleeping*, it works normally. If the status is *Uninitialized* or *Abnormal*, please initialize the HDD before use. And if the HDD initialization is failed, please replace it with a new one.

Checking HDD Status in HDD Information Interface

Steps:

1. Enter the System Information interface.

Menu >Maintenance > System Info

2. Click the HDD tab to view the status of each HDD displayed on the list, as shown in Figure 11. 22.

Label Status Capacity Free Space Property 5 Normal 76,319MB 74,752MB R/W	Type Group Local 1
5 Normal 76,319MB 74,752MB R/W	Local 1
Total Capacity 76,319MB	
Free Space 74,752MB	

Figure 11. 22 View HDD Status (2)

11.7 HDD Detection

Note: This function is not supported with 9600-R series NVR.

Purpose:

The device provides the HDD detection function such as the adopting of the S.M.A.R.T. and the Bad Sector Detection technique. The S.M.A.R.T. (Self-Monitoring, Analysis and Reporting Technology) is a monitoring system for HDD to detect and report on various indicators of reliability in the hopes of anticipating failures.

S.M.A.R.T. Settings

Steps:

1. Enter the S.M.A.R.T Settings interface.

Menu > Maintenance > HDD Detect

2. Select the HDD to view its S.M.A.R.T information list, as shown in Figure 11. 23.

S.M.A.R	.T. Settings	Bad Sect	or Detec	tion

- 3. Click the **Detect** button to start the detection.

Figure 11.24 Bad Sector Detection

Note: represents normal sector; represents bad sector detected by Bad Sector Detection; represents bad sector detected by recording.

And you can click Error info button to see the detailed damage information.

And you can also pause/resume or cancel the detection.

11.8 Configuring HDD Error Alarms

Purpose:

You can configure the HDD error alarms when the HDD status is Uninitialized or Abnormal.

Steps:

1. Enter the Exception interface.

Menu > Configuration > Exceptions

- 2. Select the Exception Type to HDD Error from the dropdown list.
- 3. Click the checkbox(s) below to select the HDD error alarm type (s), as shown in Figure 11. 25.

Note: The alarm type can be selected to: Audible Warning, Notify Surveillance Center, Send Email and Trigger Alarm Output. Please refer to *Chapter Setting Alarm Response Actions*.

Exception Type	HDD Error		•
Audible Warning			
Notify Surveillance Center			
Send Email			
Trigger Alarm Output			
Alarm Output No.	Alarm Name	IP Camera Address	^
✓ A->1		Local	
☑ A->2		Local	
■ A->3		Local	-
■ A->4		Local	
D1->1		172.6.21.66	_
☑ D1->2		172.6.21.66	
D3->1		172.6.21.116	
D5 54		179 R 91 111	~

Figure 11. 25 Configure HDD Error Alarm

- **4.** When the Trigger Alarm Output is selected, you can also select the alarm output to be triggered from the list below.
- 5. Click the Apply button to save the settings

Chapter 12 Camera Settings

12.1 Configuring OSD Settings

Purpose:

You can configure the OSD (On-screen Display) settings for the camera, including date /time, camera name, etc. *Steps:*

1. Enter the OSD Configuration interface.

Menu > Camera > OSD

- 2. Select the camera to configure OSD settings.
- **3.** Edit the Camera Name in the text field.
- 4. Configure the Display Name, Display Date and Display Week by clicking the checkbox.
- 5. Select the Date Format, Time Format and Display Mode.

OSD Configuration	
Camera	IP Camera 1 ~
Enable Privacy Mask	
01-01-2010 Fri 11: 55: 19	Clear All Clear Zone 1 Clear Zone 2 Clear Zone 3 Clear Zone 4

Figure 12. 1 OSD Configuration Interface

- 6. You can use the mouse to click and drag the text frame on the preview window to adjust the OSD position.
- 7. Click the Apply button to apply the settings.

12.2 Configuring Privacy Mask

Purpose:

You are allowed to configure the four-sided privacy mask zones that cannot be viewed by the operator. The privacy mask can prevent certain surveillance areas to be viewed or recorded.

Steps:

1. Enter the Privacy Mask Settings interface.

Menu > Camera > Privacy Mask

- 2. Select the camera to set privacy mask.
- 3. Click the checkbox of Enable Privacy Mask to enable this feature.

Figure 12. 2 Privacy Mask Settings Interface

4. Use the mouse to draw a zone on the window. The zones will be marked with different frame colors.

Note: Up to 4 privacy masks zones can be configured and the size of each area can be adjusted.

5. The configured privacy mask zones on the window can be cleared by clicking the corresponding Clear

Figure 12. 3 Set Privacy Mask Area

6. Click the Apply button to save the settings.

12.3 Configuring Video Parameters

Steps:

1. Enter the Image Settings interface.

Menu > Camera >Image

Figure 12. 4 Image Settings Interface

- 2. Select the camera to set image parameters.
- 3. You can click on the arrow to change the value of each parameter.
- 4. Click the Apply button to save the settings.

Chapter 13 NVR Management and Maintenance

13.1 Viewing System Information

13.1.1 Viewing Device Information

Steps:

1. Enter the System Information interface.

Menu >Maintenance>System Info

2. Click the **Device Info** tab to enter the Device Information menu to view the device name, model, serial No., firmware version and encode version, as shown in Figure 13. 1.

<u>Device Info</u>	Camera	Record	Alarm	Network	HDD

13.1.6 Viewing HDD Information

Steps:

- 1. Enter the System Information interface.
 - Menu >Maintenance>System Info
- 2. Click the HDD tab to enter the HDD Information menu to view the HDD status, free space, property, etc., as
 - shown in Figure 13. 6.

Figure 13. 6 HDD Information Interface

13.2 Searching & Export Log Files

Purpose:

The operation, alarm, exception and information of the NVR can be stored in log files, which can be viewed and exported at any time.

Steps:

1. Enter the Log Search interface.

Menu >Maintenance>Log Information

Log Search	Log Export

- 7. Select the backup device from the dropdown list of Device Name.
- 8. Click the **Export** to export the log files to the selected backup device.

You can click the **New Folder** button to create new folder in the backup device, or click the **Format** button to format the backup device before log export.

Notes:

- 1) Please connect the backup device to NVR before operating log export.
- 2) The log files exported to the backup device are named by exporting time, e.g.,

201105141248411ogBack.txt.

To export all the log files:

Steps:

1. Enter the Log Information interface.

Menu> Maintenance> Log Information> Log Export

2. Click the Log Export tab.

Log Sea	arch <u>Log Export</u>

Figure 13. 11 Log Export Interface

- **3.** You can check the checkbox of the HDD.
- 4. Click the **Export** button to export all the log files stored in the HDD.

13.3 Importing/Exporting Configuration Files

Purpose:

The configuration files of the NVR can be exported to local device for backup; and the configuration files of one NVR can be imported to multiple NVR devices if they are to be configured with the same parameters.

Steps:

1. Enter the Import/Export Configuration File interface.

Menu > Maintenance > Import/Export

Figure 13. 12 Import/Export Config File

- 2. Click the Export button to export configuration files to the selected local backup device.
- **3.** To import a configuration file, select the file from the selected backup device and click the **Import** button. After the import process is completed, you must reboot the NVR.

Note: After having finished the import of configuration files, the device will reboot automatically.

13.4 Upgrading System

Purpose:

The firmware on your NVR can be upgraded by local backup device or remote FTP server.

13.4.1 Upgrading by Local Backup Device

Steps:

- 1. Connect your NVR with a local backup device where the update firmware file is located.
- **2.** Enter the Upgrade interface.

Menu >Maintenance>Upgrade

3. Click the Local Upgrade tab to enter the local upgrade menu, as shown in Figure 13. 13.

Local Upgrade FTP						
Device Name	USB1-1				Refres	h

Figure 13. 13 Local Upgrade Interface

- 4. Select the update file from the backup device.
- 5. Click the Upgrade button to start upgrading.
- 6. After the upgrading is complete, reboot the NVR to activate the new firmware.

13.4.2 Upgrading by FTP

Before you start:

Configure PC (running FTP server) and NVR to the same Local Area Network. Run the 3rd-party TFTP software on the PC and copy the firmware into the root directory of TFTP.

Steps:

1. Enter the Upgrade interface.

Menu >Maintenance>Upgrade

2. Click the FTP tab to enter the local upgrade interface, as shown in Figure 13. 14.

Local Upgrade <u>FTP</u>	
FTP Server Address	
FTP Server Port	21

Figure 13. 14 FTP Upgrade Interface

- **3.** Enter the FTP Server Address in the text field.
- 4. Click the Upgrade button to start upgrading.
- 5. After the upgrading is complete, reboot the NVR to activate the new firmware.

13.5 Restoring Default Settings

Steps:

- **1.** Enter the Default interface.
 - Menu > Maintenance > Default

2. Click the **OK** button to restore the default settings.

Note: Except the network parameters (including IP address, subnet mask, gateway, MTU, NIC working mode, default route and server port), all other parameters of the device will be restored to factory default settings.

Chapter 14 Others

14.1 Configuring RS-232 Serial Port

Purpose:

The RS-232 port can be used in two ways:

• Parameters Configuration: Connect a PC to the NVR through the PC serial port. Device parameters can be configured by using software such as HyperTerminal. The serial port parameters must be the same as the NVR's when connecting with the PC serial port.

• Transparent Channel: Connect a serial device directly to the NVR. The serial device will be controlled remotely by the PC through the network and the protocol of the serial device.

Steps:

1. Enter the RS-232 Settings interface.

Menu >Configuration> RS-232

RS-232 Settings		
Baud Rate	115200	v
Data Bit	8	v
Stop Bit	1	~
Parity	None	v
Flow Ctrl	None	~
Usage	Console	v

Figure 14. 1 RS-232 Settings Interface

- 2. Configure RS-232 parameters, including baud rate, data bit, stop bit, parity, flow control and usage.
- 3. Click the Apply button to save the settings.

14.2 Configuring General Settings

Purpose:

You can configure the BNC output standard, VGA output resolution, mouse pointer speed through the Menu > Configuration > General interface.

Steps:

- Enter the General Settings interface. Menu >Configuration> General
- 2. Select the General tab.

General DST Settings	More Settings	
Language	English	~
Resolution	1024*768/60HZ	~
Time Zone	(GMT+08:00) Beijing, Urumqi, Singapore	~
Date Format	DD-MM-YYYY	~
System Date	10-09-2013	**
System Time	16:43:12	٩
Mouse Pointer Speed	• •	
Enable Wizard		
Enable Password		

Figure 14. 2 General Settings Interface

- **3.** Configure the following settings:
 - Language: The default language used is *English*.
 - **CVBS Output Standard:** Select the CVBS output standard to NTSC or PAL, which must be the same with the video input standard.
 - VGA Resolution: Select the VGA output resolution, which must be the same with the resolution of the monitor screen.
 - **HDMI Resolution:** Select the HDMI resolution, which must be the same with the resolution of the monitor screen.
 - Time Zone: Select the time zone.
 - **Date Format:** Select the date format.
 - System Date: Select the system date.
 - System Time: Select the system time.
 - Mouse Pointer Speed: Set the speed of mouse pointer; 4 levels are configurable.
 - Enable Wizard: Enable/disable the Wizard when the device starts up.
 - Enable Password: Enable/disable the use of the login password.
- 4. Click the **Apply** button to save the settings.

14.3 Configuring DST Settings

Steps:

- 1. Enter the General Settings interface. Menu >Configuration>General
- 2. Choose DST Settings tab.

Auto DST Adjustment										
Enable DST	✓									
From	Apr	•	1st	٠	Sun	•	2	0	: 00	
То	Oct	•	last	٠	Sun	•	2	0	: 00	
DST Bias	60 Minute	s								~

Figure 14. 3 DST Settings Interface

You can check the checkbox before the Auto DST Adjustment item.

Or you can manually check the Enable DST checkbox, and then you choose the date of the DST period.

14.4 Configuring More Settings for Device Parameters

Steps:

1. Enter the General Settings interface.

Menu >Configuration>General

2. Click the More Settings tab to enter the More Settings interface, as shown in Figure 14.4.

General DST Settings	More Settings
Device Name	Embedded Net DVR
Device No.	255
Auto Logout	5 Minutes 🗸 🗸
Menu Output Mode	HDMI/VGA v

- **3.** Configure the following settings:
 - Device Name: Edit the name of NVR.
 - **Device No.:** Edit the serial number of NVR. The Device No. can be set in the range of 1~255, and the default No. is 255. The number is used for the remote and keyboard control.
 - CVBS Output Brightness: Adjust the video output brightness.
 - **Operation Timeout:** Set timeout time for menu inactivity. E.g., when the timeout time is set to 5 *Minutes*, then the system will exit from the current operation menu to live view screen after 5 minutes of menu inactivity.
 - **Menu Output Mode:** You can choose the menu display on different video output. There are auto, HDMI, VGA and Main CVBS selectable.
- 4. Click the **Apply** button to save the settings.

14.5 Managing User Accounts

Purpose:

There is a default account in the NVR: *Administrator*. The *Administrator* user name is *admin* and the password is *12345*. The *Administrator* has the permission to add and delete user and configure user parameters.

14.5.1 Adding a User

Steps:

1. Enter the User Management interface. Menu >Configuration>User

User Ma	nagement					
No.	User Name	Level	User's MAC Address	Pe	Edit	Del
1	admin	Admin	00:00:00:00:00:00		1	

Figure 14.5 User Management Interface

2. Click the Add button to enter the Add User interface.

	Add User
User Name	01
Password	
Confirm	*****
Level	Guest ~
User's MAC Address	00 :00 :00 :00 :00 :00
	OK Cancel

Figure 14. 6 Add User Menu

- 3. Enter the information for new user, including User Name, Password, Level and User's MAC Address. Level: Set the user level to Operator or Guest. Different user levels have different operating permission.
 - Operator: The Operator user level has permission of Two-way Audio in Remote Configuration and

all operating permission in Camera Configuration by default.

• **Guest:** The Guest user has no permission of Two-way Audio in Remote Configuration and only has the local/remote playback in the Camera Configuration by default.

User's MAC Address: The MAC address of the remote PC which logs onto the NVR. If it is configured and enabled, it only allows the remote user with this MAC address to access the NVR.

4. Click the **OK** button to save the settings and go back to the User Management interface. The added new user will be displayed on the list, as shown in Figure 14. 7.

anagement

Figuro 1/ 8	Usor Pormission So	ttings Interface

- Figure 14. 8 User Permission Settings Interface
- **6.** Set the operating permission of Local Configuration, Remote Configuration and Camera Configuration for the user.

Local Configuration

- Local Log Search: Searching and viewing logs and system information of NVR.
- Local Parameters Settings: Configuring parameters, restoring factory default parameters and importing/exporting configuration files.
- Local Camera Management: The adding, deleting and editing of IP cameras.
- Local Advanced Operation: Operating HDD management (initializing HDD, setting HDD property), upgrading system firmware, clearing I/O alarm output.
- Local Shutdown Reboot: Shutting down or rebooting the NVR.

Remote Configuration

• Remote Log Search: Remotely viewing logs that are saved on the NVR.

- Remote Parameters Settings: Remotely configuring parameters, restoring factory default parameters and importing/exporting configuration files.
- Remote Camera Management: Remote adding, deleting and editing of the IP cameras.
- Remote Serial Port Control: Configuring settings for RS-232 and RS-485 ports.
- Remote Video Output Control: Sending remote button control signal.
- Two-Way Audio: Realizing two-way radio between the remote client and the NVR.
- Remote Alarm Control: Remotely arming (notify alarm and exception message to the remote client) and controlling the alarm output.
- Remote Advanced Operation: Remotely operating HDD management (initializing HDD, setting HDD property), upgrading system firmware, clearing I/O alarm output.
- Remote Shutdown/Reboot: Remotely shutting down or rebooting the NVR.

Camera Configuration

- Remote Live View: Remotely viewing live video of the selected camera (s).
- Local Manual Operation: Locally starting/stopping manual recording, picture capturing and alarm output of the selected camera (s).
- Remote Manual Operation: Remotely starting/stopping manual recording, picture capturing and alarm output of the selected camera (s).
- Local Playback: Locally playing back recorded files of the selected camera (s).
- Remote Playback: Remotely playing back recorded files of the selected camera (s).
- Local PTZ Control: Locally controlling PTZ movement of the selected camera (s).
- Remote PTZ Control: Remotely controlling PTZ movement of the selected camera (s).
- Local Video Export: Locally exporting recorded files of the selected camera (s).
- 7. Click the **OK** button to save the settings and exit interface.

Note: Only the *admin* user account has the permission of restoring factory default parameters.

14.5.2 Deleting a User

Steps:

- Enter the User Management interface. Menu >Configuration>User
- 2. Select the user to be deleted from the list, as shown in Figure 14. 9.

User Management							
No.	User Name	Level	User's MAC Address	Pe	Edit	Del	
	admin	Admin	00:00:00:00:00:00	-		-	
2	01	Guest	00:00:00:00:00:00			Û	

Figure 14.9 User List

3. Click the icon to delete the selected user.

14.5.3 Editing a User

Steps:

- 1. Enter the User Management interface.
 - Menu >Configuration>User
- 2. Select the user to be edited from the list, as shown in Figure 14.9.
- Click the icon to enter the Edit User interface, as shown in Figure 14. 10.
 Note: The admin user can also be edited.

Edit User							
User Name	01						
Change Password	☑						
Password							
Confirm							
Level	Operator ~						
User's MAC Address	00 :00 :00 :00 :00 :00						
	OK Cancel						

Operator and Guest

Admin Figure 14. 10 Edit User Interface

4. Edit the corresponding parameters.

• Operator and Guest

You can edit the user information, including user name, password, permission level and MAC address. Check the checkbox of **Change Password** if you want to change the password, and input the new one in the text field of **Password** and **Confirm**.

• Admin

You are only allowed to edit password and MAC address. Check the checkbox of **Change Password** if you want to change the password, and the input the correct old password, and the new one in the text field

of **Password** and **Confirm**.

5. Click the **OK** button to save the settings and exit the menu.

Appendix

Glossary

- **Dual Stream:** Dual stream is a technology used to record high resolution video locally while transmitting a lower resolution stream over the network. The two streams are generated by the NVR, with the main stream having a maximum resolution of 4CIF and the sub-stream having a maximum resolution of CIF.
- HDD: Acronym for Hard Disk Drive. A storage medium which stores digitally encoded data on platters with magnetic surfaces.
- **DHCP:** Dynamic Host Configuration Protocol (DHCP) is a network application protocol used by devices (DHCP clients) to obtain configuration information for operation in an Internet Protocol network.
- **HTTP:** Acronym for Hypertext Transfer Protocol. A protocol to transfer hypertext request and information between servers and browsers over a network
- **PPPoE:** PPPoE, Point-to-Point Protocol over Ethernet, is a network protocol for encapsulating Point-to-Point Protocol (PPP) frames inside Ethernet frames. It is used mainly with ADSL services where individual users connect to the ADSL transceiver (modem) over Ethernet and in plain Metro Ethernet networks.
- **DDNS:** Dynamic DNS is a method, protocol, or network service that provides the capability for a networked device, such as a router or computer system using the Internet Protocol Suite, to notify a domain name server to change, in real time (ad-hoc) the active DNS configuration of its configured hostnames, addresses or other information stored in DNS.
- **Hybrid DVR:** A hybrid DVR is a combination of a DVR and NVR.
- **NTP:** Acronym for Network Time Protocol. A protocol designed to synchronize the clocks of computers over a network.
- NTSC: Acronym for National Television System Committee. NTSC is an analog television standard used in such countries as the United States and Japan. Each frame of anNTSC signal contains 525 scan lines at 60Hz.
- NVR: Acronym for Network Video Recorder. An NVR can be a PC-based or embedded system used for centralized management and storage for IP cameras, IP Domes and other DVRs.
- **PAL:** Acronym for Phase Alternating Line. PAL is also another video standard used in broadcast televisions systems in large parts of the world. PAL signal contains 625 scan lines at 50Hz.
- **PTZ:** Acronym for Pan, Tilt, Zoom. PTZ cameras are motor driven systems that allow the camera to pan left and right, tilt up and down and zoom in and out.
- USB: Acronym for Universal Serial Bus. USB is a plug-and-play serial bus standard to interface devices to a host computer.

FAQ

• Why does my NVR make a beeping sound after booting?

The possible reasons for the warning beep on the NVR are as follows:

- a) There is no HDD installed in the NVR.
- b) The HDD is not initialized.
- c) HDD error

To cancel the beeping sound and use the NVR without HDD, enter the Exception Settings interface. For detailed information, see *Chapter Handling Exceptions Alarm*.

• Why does the NVR seem unresponsive when operating with the IR remote control?

Please read through the section Using the IR Remote Control, and check:

- a) The batteries are installed correctly in the remote, making sure that the polarities of the batteries are not reversed.
- b) The batteries are fresh and are not out of power.
- c) The remote has not been tampered with.
- d) There are no fluorescent lamps in use nearby.

• Why does the PTZ seem unresponsive?

If the PTZ seem unresponsive, please check:

- a) The RS-485 cable is properly connected.
- b) The dome decoder type is correct.
- c) The dome decoder speed configuration is correct.
- d) The dome decoder address bit configuration is correct.
- e) That the main board RS-485 interface is not broken.

• Why is there no video recorded after setting the motion detection?

If there are no recorded video after setting the motion detection, please check:

- a) The recording schedule is setup correctly by following the steps listed in *Configuring Motion Detection Record and Capture*.
- b) The motion detection area is configured correctly (See Setup Motion Detection Alarm).
- c) The channels are being triggered for motion detection (See Setup Motion Detection Alarm).

• Why doesn't the NVR detect my USB export device for exporting recorded files?

There's a chance that the NVR and your USB device is not compatible. Please refer to our company's website to view a list of compatible devices.

• My NVR is in Live View mode and the menu does not show up. It does not respond to the mouse, the front panel, the remote or keyboard.

Your NVR may be in auxiliary mode. This occurs when the Main/Spot button is pressed on the front panel. To return to the previous mode of operation, press the button again and then press the Enter button on the front panel.

List of Compatible IP Cameras

List of IP Cameras Supported by 9600/8600/7700/7600 Series

Note: **ONVIF compatibility** refers to the camera can be supported both when it uses the ONVIF protocol and its private protocols. **Only ONVIF is supported** refers to the camera can only be supported when it uses the ONVIF protocol.
