### Secu365 User Manual

Secu365 is a system providing intelligent security management which focuses on residential applications and SME users. Based on the concept of HAAS (Hard as a server), and the integration of the cloud system, you are able to receive the security information anytime and any where.

### • 1. Hardware

1.1 Components of system hardware

Central Controller (Edge Server)

Fingerprint Smart Lock (UL3 pro)

Fingerprint Access (C2 Slim)

Camera (Easy View)

### • 1.2 Control Center Edge Server

CPU	Dual-core 1.0G	СОМ	1WAN and 4 PoE TCP/IP output
Storage	4GB		Support wireless AP switching
Memory	1,000,000 records	Support	4/8/16 CH access control and cctv camera input
Display	OLED display	I/O	4 CH

• 1.3 OLED display message

 1.5 Download Secu365 Mobile app or use network connection

### • 2. Edge Server connection and setting

#### • 2.1 Starting Edge Server

When you turn on the Edge Server at the first time, it will show the default setting of the Edge Server wireless AP function (Default SSID: Secu365), and the OLED display will show the IP address. User can log-in the web server to set up the system through Edge Server IP address or Edge Server Wireless.

### • 2.2 Log-in Web server

Open Browser in your computer, enter Edge Server IP address, Log in Edge Server Web server.

Secu365

### • 2.3.3 Secu Spot

Secu365 is a three-dimensional security solution, so the concept of security spot is enhanced. Security point integrates access control, video, alarm and other comprehensive applications.

Secu365 | 10 User Manual | 10 Click the "Add" button at the up right hand corner.

Cancel	Add Secu Spot	Next
	Upload image size less than 500K	
Name		
ዲ Name		
Location		
Access Controll	Smart Lock	Camera

Input the name and location, click the red icon, it can upload Secu Spot image, and this image will be displayed in the daily record.

Click "Next" to choose the device type integrated in.

Click "Find nearby access control device" Edge Server will automatically search the physical access control device and display the list.

#### Suggestion:

For the first time installation, it is recommended to connect device's internet cable to edge server POE port to quickly add and configure the device.

Cancel	Add Access Control	Next
Q Find nearby	y access control device	
	2 <b>Slim</b> 50300119200107 / 192.168.17.43	
	2 <b>Slim</b> 34567891234564 / 192.168.17.148	

Choose the device in the list and click "Next" .

According to the actual network situation, configuring the network IP address of access control devices, it is suggested to set the same network segment as Secu365.

Click Next and the device will automatically be added to the system.

Go back to "Secu Spot" page after adding the physical access control device.

You can check the records and the events of the spot.

		Users	Add

You can check and continue to add other devices.

#### Supported devices:

Video Camera: "Easy View" Camera. Access Control Device: C2 Slim Fingerprint reader or UL3 pro Smart lock.

User under the spot point can be queried and added.

#### Important:

Smart Lock can only be added through mobile app. Maximum support for a Secu Spot: 1 access control + 1 camera or 1 smart door lock + 1 Camera.

For adding additional camera, please refer to adding access control equipment.

### • 2.3.4 User Fingerprint Registration

To complete the addition of Secu Spot and front-end devices (access control devices/cameras/smart locks), users should be assigned to the corresponding security points according to access control rights.

Please return to the user interface and select a user for fingerprint registration.

	≡	Users	Add

### • 3. Secu365 Mobile APP User Guide

Download Secu365 Mobile APP by scanning the 2-d bar code, install and register an account.

### • 3.1 APP Account Register

Open the APP, click "REGISTER" to start registering an account.

Secu365 account is registered by email ID, enter email ID and password, and agree to service term.

#### Important:

The email of the registered account is the only email for resetting password.

Registered password format

- 1. Password is 6 to 16 digits.
- 2. Use the combination of letters, numbers and symbols.
- 3. Avoid using the following password format. The system will

remind you to modify the password if it does not meet the security requirements:

(1) The password is the same as the member's name or E-mail address.

(2) All letters.

(3) All number.

After the successful registration, enter your account ID and password to login to APP.

### • 3.2 Start Use

Add Edge Server to APP for the first time use, click + button

Scan the two-dimensional code on the Edge Server or under the Edge Server Web Server-APP page. Or enter Edge Server serial number manually for manual additions. Click on the "Done" button to proceed to the next step.

#### Important:

Edge Server and mobile APP must be linked to the cloud in order to be managed properly. Therefore, by default, mobile APP is required to complete the management of Edge Server smoothly by linking to Edge Server's own wireless AP and landing in Edge Server's web server for cloud configuration. For the first time using Edge Server and APP bindings, you need to link Edge Server wireless AP by mobile phone, open Edge Server wireless AP function through the picture prompt of APP, and the WiFi of mobile phone links to the wireless AP.

Edge Server show WiFi AP open

#### Important:

Edge Server's wireless AP SSID is : SECU365

Wireless AP can be directly connected without a password. AP will shut down automatically in 10 minutes with no data activities.

To link the Mobile APP to the wireless Edge Server, click "I HAVE CONNECTED AND STARTED SETTING UP", It will automatically connect to Edge Server's built-in Web server. **According to the prompt operation boot completed, Edge Server system settings. Refer to "2.2 Login Webserver" for details. (original Chinese version needed)** 

When finishing the setup of APP, it will lead to the main interface of mobile phone.

Menu: Click on the menu to display the current Edge Server **Operations Management Menu.** 

Active User, Active Spot and Events in the System.

Secu Spot status bar: Secu Spot status will be displayed here shortly after successful setup.

#### **APP System Settings**

Name: Current Edge Server System Status. Server: Under current APP account, Edge Server device list, or add Edae Server.

Setting: APP Account Management.

#### 3.3.1 APP Menu

APP menu is the same as Edge Server Web server, refer to 2.3~2.4 for the details.

### • 3.3.2 Secu Spot Status

The complete status of Secu Spot will be displayed:

Name of Secu Spot: When adding Secu Spot, you can customize the name of Secu Spot. You can use Secu Spot photos as background pictures.

#### Models and status of equipment:

Smart Lock Device

Solutions The green icon represents the device's online status.

The red icon indicates that the device is offline.

#### Door Status and Remote open:

🙆 Door opened 🙆 Door closed. Click 🙆 icon to remote open the door

#### **Live Video**

Real-time record: Click on the real-time record to view the user record of the day at the Secu Spot. You can click on the snapshot of the user picture and the short video of the user operation (12-15 seconds).

Door Status Switch: Normal/Keep Open /Keep close status.

Secu Spot Setup: Click Setup Button to Secu Spot Setup page.

### • 3.3.3 Add Smart Lock

Because the smart lock has no network communication function, the Wifi bridge is used to connect the smart lock via the Bluetooth and connect to the network via the Wifi.

Suggestions and Notes:

Please ensure a good Internet wireless network environment.

Please plug the Wifi bridge into the power outlet.

Smart Lock Installation (4XAA) Battery.

Please turn on the Bluetooth on mobile phone.

For a quick setup, keep the Wifi bridge, Smart Lock and Mobile Device within 10FT.

Under Secu Spot - Device, select Smart Lock and click "+"

System will remind you to turn on Bluetooth on mobile phone. Through Bluetooth, Smart Lock is searched, selected. And automatic go to next step.

Search the Gate Way and choose next step  $_{\circ}\,$  Setup the Gate Way WiFi connection.

APP will input the connected WIFI SSID directly and input the password. Click next step and wait for the smart lock connection.

#### • 3.3.4 Add user

Choose add "User" in the APP menu.
